Four Reasons to Choose Composites for Your Next Interconnect Application

Glenair's composite interconnect components are manufactured from high-grade engineering thermoplastics for the toughest application environments. Specifically geared for high-performance air, sea, land and space applications, Glenair's line of composite connectors and backshells are ideally suited for systems which require electromagnetic compatibility, reliable environmental protection and long-term durability. Here's why:

Corrosion Resistance: One of the most appealing attributes of composites is their unlimited corrosion resistance as compared to conventional metal materials. Aluminum interconnect components, for example, are subject to galvanic coupling which causes the material to be "sacrificed" to its cadmium/nickel plating. Since high-temperature composite plastic is not sacrificial to plating, finished products last longer, require less maintenance and so directly reduce the overall cost of ownership of the interconnect system.

Vibration Dampening: Unlike metals, polymer plastics are less subject to harmonic resonance due to their lighter weight and inherent attenuating properties. Which means threaded components made from these materials are far less likely to vibrate loose when subjected to prolonged periods of vibration and shock. Again, reduced maintenance and reduced cost of ownership are the major benefits realized by systems built from vibration dampening composite thermoplastics.

Weight Reduction: Composites offer increased strength at lighter weights. Weight savings for composites over aluminum are approximately 40% (depending on component design). Savings versus other materials are even more pronounced: up to 80% for stainless steel and brass. Composite materials directly reduce aircraft empty weights and increase fuel fractions—resulting in smaller, lower-cost aircraft that use less fuel to perform a given mission.

Durability: Glenair's line of composite thermoplastic interconnect components are cleverly designed to avoid many of the durability problems associated with conductive plated parts. Through the use of selective plating—which limits easy-to-scratch plated surfaces to the protected portions of the part—Glenair has effectively eliminated superficial damage to coupling nuts, saddle bars and box exteriors. The parts are free from visible wear-and-tear problems that forces premature replacement of backshells, connectors, box assemblies and other EMC interconnect components.

Part Number Index: Inside Back Cover

310 - Shrink Boot/Overmold Adapter

Glenair composite shrink boot adapters are designed for use in open-wire bundle cable assemblies that require the splash-proof environmental protection and light-duty strain-relief provided by lipped-type shrink boots such as Glenair 770-001 heat moldable shrink boots. These simple adapters can also be used to accommodate overmolding compounds typically applied to fully-environmental, jacketed cables. The adapters are attached to standard circular connectors and can be plated to provide an EMC ground path. Our composite shrink-boot and overmold adapters are a perfect, light-weight choice for high-performance cable assemblies. The two styles are available for most circular connectors.

Description	Part Number	Page
Shrink Boot Adapter with Rotatable Coupling Nut ; Straight	310-045	A-2
Shrink Boot Adapter with Direct Coupling - Straight	310-017	A-4

311 - EMI/RFI Lamp Base Thread Backshell

A sleek, compact shield termination backshell assembly that utilizes a simple lamp-base thread device to capture conductive cable shielding; yielding both strain relief and EMI/RFI protection. Straight and 90° shell styles are available. This simple, light-weight backshell may optionally be equipped with a shrink-boot for a modicum of environmental protection.

Description	Part Number	Page
Lamp Base EMI/RFI Shield Termination Backshell - Straight and 90°	311-034	A-5
Lamp Base EMI/RFI Shield Termination Backshell with Shrink Boot Porch - Straight, 45° and 90°	311-019	A-6
Lamp Base EMI/RFI Environmental Adapter with Shrink Boot Porch and Direct Coupling - Straight	311-063	A-8

319 - EMI/RFI Shield Sock Assemblies

Glenair shield sock assemblies offer an alternative strain relief and shield termination solution for shielded, jacketed cable assemblies. Two basic styles are available; with fixed position or user-adjustable entry angles. Made from high-temperature composite thermoplastic, these rugged assemblies offer easy installation, long term durability, and outstanding weight and cost reduction. The products are equipped with reliable "click-style" self-locking rotatable coupling nuts. Available shielding includes standard metal braid as well as light-weight metal clad composite shielding. The shield sock's braid is terminated directly to the cables own braid with *BAND-IT*® bands and tools.

Description	Part Number	Page
Composite Thermoplastic Shield Sock Assembly Procedure		A-10
Swing Arm Backshell with Shield Sock and Self-Locking Rotatable Coupling - Adjustable to Straight, 45° and 90°	319-064	A-12
EMI/RFI Backshell with Shield Sock and Self-Locking Rotatable Coupling - Straight Only	319-120	A-14
EMI/RFI Banding Backshell Shield Sock with Shrink Boot Porch and Self Locking Rotatable Coupling - Straight, 45° and Ultra Low Profile 90°. Uses Micro Band to Attach Shield	319-134	A-16
EMI/RFI Shield Sock Strain Relief with Shrink Boot Porch and Self Locking Rotatable Coupling - Straight, 45° and 90°	319-136	A-18
Shield Sock Strain Relief with Self Locking Rotatable Coupling - Straight, 45° and 90°	319-137	A-22
"Wide Mouth" Swing Arm Strain Relief with Shield Sock and Self Locking Rotatable Coupling - Straight, 45° and 90°	319-138	A-24

320 - Extender Backshells

These simple composite backshells—when used with connectors with crimp and poke contact termination—provide extensions between the connector and strain relief, offering the convenience of additional space to accommodate service loops, re-terminations, diodes, resistors and other uses.

Description	Part Number	Page
Extender Backshell with Self-Locking Rotatable Coupling - Straight, 45° and 90°	327-060	A-26

347 - Shorting Cap Backshells

Composite Shorting Cap Backshells provide a complete enclosure for the rear of panel-mounted receptacle connectors, and are also adaptable to the fabrication of shorting plugs, special purpose test connectors, or installation of discrete components. Shorting cap backshells also provide an ideal enclosure for fiber optic loop backs used in circuit testing.

Description	Part Number	Page
Shorting Cap Backshell with Lanyard Attachment and Self Locking Rotatable Coupling	347-129	A-28

360 - Non-Environmental Backshells with Strain Relief

Glenair provides straight and angled composite backshells with strain reliefs—including standard cable clamps and Glenair's patented Qwik-Clamp—for light and general duty applications where environmental protection of cable-to-connector terminations is not required.

Description	Part Number	Page
Series 360 Non-Environmental Backshell Assembly Instructions		A-30
Non-Environmental Backshell with Self Locking Rotatable Coupling and Strain Relief - Straight and 90°	360-014	A-32
Non-Environmental Backshell with Self Locking Rotatable Coupling and Qwik-Clamp - Straight, 45° and 90°	360-015	A-34

370 - Environmental Backshell with Strain Relief

Glenair composite environmental backshells with strain-relief are perfectly suited for the broad range of interconnect cable applications that require reduced weight and serious corrosion protection. Glenair makes both straight and angled versions for all popular connector series and sizes. Two basic versions are available: a standard saddle-clamp version and our patented Qwik-Clamp.

Description	Part Number	Page
Series 370 Environmental Backshell Assembly Instructions		A-36
Cable Sealing and Environmental Backshell with Self Locking Rotatable Coupling and Strain Relief Clamp or Nut - Straight or 90°	370-016	A-38
Cable Sealing and Environmental Backshell with Self Locking Rotatable Coupling and Qwik-Clamp or Nut - Straight or 90°	370-017	A-40

377 - Fiber Optic Backshells

Glenair composite fiber optic backshells provide protection and alignment of individual optical fiber media in open-bundle and jacketed cable assemblies. Straight, and 90° angled fittings are available for added convenience in fiber cable routing. The 90° angled versions utilize a smooth, sweeping profile to eliminate micro-bending of fiber media.

Description	Part Number	Page
Fiber Optic Strain Relief Backshell with Self Locking Rotatable Coupling and Fiber Alignment Grommet and Optional Banding adapter or Nut	377-040	A-42

380 - EMI/RFI Non-Environmental Backshells

Glenair's composite EMI/RFI Shield Termination Backshell family includes a range of reliable and convenient termination methods, including:

- Cone and Ring Style backshells, and
- Ultra lightweight "Knit Braid" designs

Each style offers a repairable termination method ideal for field service of damaged connector contacts in both jacketed and open-wire bundle cable assemblies. The 380 series is non-environmental. For cable sealing backshells with EMI/RFI shield termination see Series 390.

Description	Part Number	Page
Series 380 EMI/RFI Non-Env. Backshell Assembly Instructions (Type D)		A-44
Series 380 EMI/RFI Non-Env. Backshell Assembly Instructions (Type E)		A-56
Cone and Ring Style Shield Termination Backshell with Self Locking Coupling Nut and Strain Relief - Straight and 90°	380-099	A-46
Cone and Ring Style EMI/RFI Backshell with Self Locking Rotatable Coupling and Qwik-Clamp - Straight, 45° and 90°	380-100	A-48
Knit Braid Style EMI/RFI Shield Termination Backshell with Qwik-Ty and Rotatable Coupling	380-130	A-52
Knit Braid Style EMI/RFI Shield Termination Backshell with Clamp and Rotatable Coupling	380-131	A-53
Knit Braid Style EMI/RFI O-Ring Equipped Shield Termination Backshell with Shrink Boot Adapter and Rotatable Coupling	380-132	A-54
EMI/RFI Nickel Plated Copper Knit Braid Material	107-044	A-55
Multi Shield Cone and Ring Style EMI/RFI Shield Termination Backshell with Self Locking Rotatable Coupling and Strain Relief	387-083	A-58

390 - EMI/RFI Environmental Backshells

Glenair's composite Series 390 backshells utilize standard cone and ring style shield termination to deliver 360° shield/screen grounding with low DC resistance across the termination area. Cable sealing O-rings provide full-immersion protection to 6 ft. The lightweight, corrosion proof backshell is ideally suited to general duty use in both military and commercial interconnect cable applications. Glenair 390 series backshells are fully tooled for all popular connector series and sizes.

Description	Part Number	Page
Series 390 EMI/RFI Environmental Backshell Assembly Instructions		A-60
Environmental Cone and Ring Style EMI/RFI Shield Termination Backshell with Self Locking Rotatable Coupling and Strain Relief - Straight, 45° and 90°	390-052	A-62

440 - EMI/RFI Banding Backshells

Banding is by far the most popular and reliable method of EMI shield termination used today in high-performance cable assemblies. Glenair supplies composite banding backshells in straight, 45° and 90° entry angles, with accommodation for either standard or lighter weight and duty micro *BAND-IT*® bands. Various configurations are available—all made from lightweight composite thermoplastic.

Description	Part Number	Page
Banding Backshell Assembly Instructions		A-66
Ultra Lightweight Banding Strain Relief with Rotatable Coupling	440-087	A-64
EMI/RFI Micro-Banding Backshell with Qwik-Ty Strain Relief, Shrink Boot Groove and Self Locking Rotatable Coupling - Straight, 45° and Ultra Low Profile 90°	440-143	A-68
EMI/RFI Micro-Banding Backshell with Shrink Boot Groove and Self Locking Rotatable Coupling - Straight, 45° and Ultra Low Profile 90°	440-144	A-70
EMI/RFI Banding Backshell with Shrink Boot Groove and Self Locking Rotatable Coupling - Standard Profile Straight, 45° and 90°	447-325	A-72
EMI/RFI Micro-Banding Backshell with Shrink Boot Groove and Self Locking Rotatable Coupling - Standard Profile Straight, 45° and 90°	447-326	A-74
EMI/RFI Banding Backshell with Qwik-Ty Strain Relief and Shrink Boot Groove - Standard Profile Straight and 90°	447-327	A-76
EMI/RFI Dual Banding Backshell with Self Locking Rotatable Coupling - Straight and 90°	447-331	A-84
EMI/RFI Banding Backshell with Strain Relief - Standard Profile Straight and 90°	447-711	A-87

447 - EMI/RFI Band-in-a-Can

The Glenair Series 447 Band-in-a-Can backshell combines the convenience of banding with the versatility of a standard saddle bar strain-relief. The 447 series is available in both single and dual banding porch designs, as well as an optional Qwik-Clamp strain-relief version. The Band-in-a-Can is a perfect solution for standard shielded and jacketed cable assemblies. The selectively plated product offers 360° shield grounding without the wear-and-tear problems usually associated with plated interconnect products.

Description	Part Number	Page
EMI/RFI Band-in-a-Can Backshell with Strain Relief Clamp - Standard Profile Straight and 90°	447-328	A-78
EMI/RFI Environmental Band-in-a-Can Backshell with Strain Relief Clamp or Qwik-Clamp – Standard Profile Straight and 90°	447-329	A-80
EMI/RFI Non-Environmental Band-in-a-Can Backshell with Qwik-Clamp and Self-Locking Rotatable Coupling – Standard Profile Straight and 90°	447-330	A-82
EMI/RFI Low Profile Micro Band-in-a-Can Backshell with Strain Relief Clamp	447-657	A-86

450 - Qwik-Ty Strain Reliefs

Glenair's Qwik-Ty® strain reliefs offer a unique method of providing strain relief to open wire bundles equipped with circular connectors. The Qwik-Ty® comes in straight, 45° and 90° configurations, and features a low profile, reduced weight and simple installation. Assembly with plastic tie straps or lacing tape is quick and secure.

Description	Part Number	Page
Qwik-Ty Strain Relief with Self Locking Rotatable Coupling - Straight, 45° and Low Profile 90°	450-029	A-88
Qwik-Ty Strain Relief with Ground Lug and Self Locking Rotatable Coupling - Straight, 45° and Low Profile 90°	450-030	A-89
Ultra Lightweight Qwik-Ty Strain Relief with Free Rotating Coupling - Straight and Low Profile 90°	450-034	A-90

550 - EMI/RFI Rectangular Backshells

Glenair's line of rectangular backshells is the largest in the industry. The short list of composite thermoplastic versions shown here provide EMI protection for rectangular connectors used in harsh or severe operating environments. Our D-Subminiature and Micro-D versions are both available in top, side and 45° entry configurations, in a full range of conductive and non-conductive finishes.

Description	Part Number	Page
EMI/RFI Banding Backshell for MIL-DTL-83513 Micro-D Connectors - Top, 45° and Side Entry	507-088	A-92
EMI/RFI Banding Backshell for MIL-DTL-24308 D-Subminiature Connectors - Top, Side and End Entry	557-186	A-94

610 - "E" Nuts

"E" Nuts are typically used on the back of connectors with no EMI/RFI, environmental or strain-relief requirement. But since many OEMs require that all connectors be equipped with a backshell, the "E" nut fills the threads on the back of the connector and compresses the sealing grommet—all without the added bulk or weight of a standard backshell. Composite "E" Nuts are available in both plated and unplated designs for all popular connector series and sizes.

Description	Part Number	Page
"E" Nut Backshell	610-014	A-96

620 - Strain Relief Clamps

Glenair offers a comprehensive selection of composite strain reliefs for circular connectors. Straight, 45° and 90° styles are available to fit most common connector types. Saddle clamps tighten around the cable assembly to ensure it remains in place— even in the face of potentially damaging tugs or twists.

Description	Part Number	Page
Composite Saddle Clamp Assembly Procedure		A-20
Strain Relief Clamp with Self-Locking Rotatable Coupling - Straight, 45° and 90°	620-042	A-97
Swing Arm Strain Relief with Self Locking Rotatable Coupling Nut	627-122	A-98
Swing-Arm Strain Relief with Keyed Banding Insert	627-142	A-100

630 - Thru-Box, Panel and Bulkhead Fittings

Glenair manufactures a full-spectrum line of feed-through fittings for routing wire and cable into and out of switchgear and other types of junction boxes. The composite fittings in this section are ideal for thru-panel and bulkhead applications in harsh environmental settings.

Description	Part Number	Page
EMI/RFI Environmental Thru-Box, Panel and Bulkhead Banding Adapter - Front or Rear Mount	630-030	E-36
Universal Environmental Thru-Box, Panel and Bulkhead Universal Adapter	630-031	E-38
EMI/RFI Environmental Box Feedthru Cable / Conduit Adapter	637-094	E-40

770 - Shrink Boots

Glenair offers a standard range of adhesive and non-adhesive heat moldable shrink boots for use with our metal and composite backshells. Shrink boots provide strain relief and environmental protection in non-jacketed cable and/or conduit assemblies.

Description	Part Number	Page
Heat Moldable Shrink Boot - Straight and 90°	770-001	A-102

660 - Protective Covers and Stowage Receptacles

Protective covers are a critical component in interconnect systems where maintenance and test cycles can lead to damage of exposed connectors. Conductive and non-conductive plating options are available to match the conductivity and impedance requirements of the application and the connector.

Description	Part Number	Page
MIL-DTL-5015 Plug and Receptacle Covers	660-045 / 046	B-3
MIL-DTL-28840 Plug and Receptacle Covers	660-047 / 048	B-4

MIL-DTL-38999 Series III Receptacle Cover with Anti-Rotation Device	667-079	B-11

740 - Convoluted Tubing Wire Protection Systems

Glenair's supplies a number of lightweight, flexible wire circuit protection solutions made from high-temperature polymer plastics. These polymer convoluted tubing products provide extremely rugged, lightweight enclosures for wiring systems deployed in harsh application environments. The crush-resistant materials offer exceptional flexibility and abrasion resistance, and can be combined with Glenair composite end-fittings, transition-fittings, EMI braiding and jacketing to meet almost any installation requirement. In addition to a complete range of DuPont™ Teflon® tubing types (PTFE, FEP, ETFE and so on), Glenair also offers a low-outgassing halogen-free polymer called PEEK that far out performs other plastic tubing formulas in its strength to weight ratio and has a V-O flammability rating down to 0.057 inches without the use of additives.

Description	Part Number	Page
Type A - Convoluted Tubing Only - Series 74 Convoluted Tubing	120-100	C-7
Type B - External Black Dacron® Braid - Series 74 Convoluted Tubing	120-103	C-8
Type C - External Shield and Jacket - Series 74 Convoluted Tubing	121-100	C-9
Type D - External Shield - Series 74 Convoluted Tubing	121-101	C-10
Type E - Two External Shields - Series 74 Convoluted Tubing	121-102	C-11
Type F - Jacket and Two External Shields - Series 74 Convoluted Tubing	121-103	C-12

103 - EMI/RFI Braided Shielding and Banding Split-Rings

For many applications, the cable shield is the most important element in controlling EMI. Unfortunately, metal shielding—especially when applied in multiple layers—can be extremely heavy. The opportunity to provide conductive EMI shielding at a fraction of the weight of metal is the principal advantage of composite thermoplastic EMI/RFI shielding*. Glenair is the industry leader in the design and manufacture of these unique screening products, supplied both in 100% composite and hybrid metal/plastic configurations.

As is commonly used in conjunction with composite shield socks, the banding split ring is a useful accessory that protects wire conductors from damage in shield-to-shield terminations.

Description	Part Number	Page
Composite Light Weight Metal-Clad EMI/RFI Braided Shielding (100%)	103-026	D-2
75%/25% Blended Composite/Metal EMI/RFI Braided Shielding	103-027	D-3
PEEK Tubular Braid (Black) for Series 74 Convuluted Tubing	102-051	D-4
AS85049 Composite Banding Split-Ring	687-749	D-5

*Glenair's composite light weight metal-clad EMI/RFI braiding is made from AmberStrand®

140 - Composite EMI/RFI Junction Boxes

Glenair's lightweight/high-strength "CostSaver" Composite EMI/RFI Junction Boxes are ideally suited for use in harsh environments, where resistance to electromagnetic interference, corrosive fluids, high temperatures, shock and vibration are critical requirements. The boxes are designed to meet the shock and vibration requirements of MIL-S-901D and MIL-STD-167SHIPS. Box materials also meet stringent EMI/RFI/HIRF and indirect lightning strike performance specifications.

MIL-DTL-38999 Series III Type Environmental Connectors

Glenair's composite MIL-DTL-38999 Series III Type Environmental Connector Series is built to ensure robust, durable performance. Connector polarization keys and keyways are manufactured to extremely tight tolerances, facilitating reliable mating and minimizing mating cycle wear. Composite shell bodies offer reduced weight, excellent environmental performance and reliable resistance to vibration and shock. Resilient elastomer inserts and heat-treated beryllium copper contact retention clips provide trouble-free crimp contact insertion and removal. Insert arrangements are IAW MIL-STD-1560, or appropriate sub-sets depending on intended application. Consult factory for available insert arrangements.

Glass-filled composite thermoplastic resins in pellet form, ready for use in injection molding applications.

Generally, when we speak of “composites,” we refer to materials containing fibers, primarily glass, impregnated within a plastic resin or “matrix”. This combination produces strong, lightweight, corrosion-resistant and dimensionally stable materials. Such materials also provide design flexibility and high dielectric strength.

Glass fiber and resin complement each other well. Just as a metallurgist might combine tin and copper to produce bronze—a material which is much stronger than either base metal by itself— combining glass fiber with a resin matrix results in a material that is more useful than either of its constituent components is on its own.

Certain plastics are extremely strong yet subject to cracking or other forms of stress-related damage. When the plastic matrix is augmented with glass fibers, a wide range of performance benchmarks can be achieved including improved wear-resistance, crush-resistance, and dimensional stability.

Glenair composite interconnect components are principally manufactured from 30% glass fiber polyetherimide (PEI), an amorphous thermoplastic with outstanding heat and chemical resistance and high strength. At room temperature the 30% glass filled PEI exhibits strength far beyond that of most engineering thermoplastics, with a tensile strength yield of over 15,000 psi. The PEI material meets the most stringent outgassing and flammability requirements.

Composite Thermoplastic Vs. Common Metal Materials

Material	Specific Gravity	Density (lbs. Inch ³)	Salt Spray
Composite	1.27 - 1.51	.055	2000+ Hrs
Aluminum	2.55 - 2.80	.098	48-1000 Hrs
Titanium	4.51 - 4.62	.162	500-1000 Hrs
Stainless Steel	7.70 - 7.73	.284	500-1000 Hrs

Glenair Composite Connector and Accessory Production Capabilities

Glenair is the recognized leader in composite thermoplastic research and development for the interconnect accessory industry. In fact, no one else has tooled even a small fraction of the composite thermoplastic accessories available today from Glenair. The product line includes circular and rectangular connectors and accessories, cable junction boxes, conduit, conduit fittings, protective covers, shielding, shielding support rings, and more. It is an ongoing goal at Glenair, largely achieved at this point, to be able to offer equivalent function composite thermoplastic interconnect components for the complete range of interconnect products we produce in metal.

Glenair composite components are produced in injection molded and, in certain cases, machined versions ideally suited for use in harsh environments where resistance to high temperatures, outgassing, corrosive fluids, fire, and shock and vibration is required. Glenair composites are ASTM E595 space rated, and are qualified to the shock, vibration, thread strength and bend moment requirements of MIL-DTL-38999 and SAE AS85049. The materials also meet stringent EMI/RFI/HIRF and indirect lightning strike performance specifications.

Glenair has the largest and most experienced staff of composite engineers and manufacturing experts in the interconnect accessory industry. Their combined expertise insures Glenair composite products mate correctly with both

metal and composite connectors and meet the customer's most stringent performance requirements. All Glenair designs provide a dimensionally stable and cadmium-free alternative to plated aluminum and brass.

Glenair composite material options include Ultem® (PEI), Amodel® (PPA), Ryton® (PPS), Torlon® (PAI), PEEK, Siltem and LCP. Base materials can be augmented with conductive and non-conductive additives and reinforcing fibers to meet specific functional specifications. As mentioned, each composite material has its own specific structural properties. The following is a brief introduction to the most common materials used by Glenair:

Glenair Composite Connector and Accessory Production Capabilities

Ultem® (PEI) is an amorphous thermoplastic available in extruded bars for machining and pellets for injection molding. It combines high performance with good processing characteristics and offers high heat resistance, high strength

modulus and broad chemical resistance. Ultem 2300 is a 30% glass filled thermoplastic which displays excellent property retention and resistance to environmental stress. It can be further reinforced with conductive fibers, or plated, for EMI resistance. Ultem performs in operating environments up to 378° F (192° C) long term and 410° F (210° C) short term. Ultem meets ASTM E595 outgassing, 14 CFR Part 25 flammability, and zero halogen outgassing requirements.

Glenair stocks an abundant supply of the composite materials used in the fabrication of our parts.

Ryton® (PPS) is a high temperature, injection molded material. It has good mechanical properties and excellent chemical resistance at elevated temperatures. Different grades are available including glass filled and glass/mineral filled versions. Ryton R4-XT is a 40 percent glass filled version engineered for improved knit-weld line characteristics. As a semi-crystalline material, Ryton exhibits excellent resistance to prolonged exposure to high temperatures, up to 500° F (260° C). Ryton also provides outstanding resistance to a broad spectrum of aggressive chemicals and has very stable dielectric and insulating properties. Ryton meets ASTM E595 outgassing requirements and UL94 flammability tests.

Glenair's G-FLEX polymer (polyetherimide-siloxane) is a high-temperature material used primarily to produce annular convoluted tubing. The material is offered in a broad range of operating temperatures, has exceptional flexibility and good crush resistance. In certain applications, G-FLEX is a suitable alternative to costlier halogen-free composite polymers such as PEEK (polyetheretherketone). PEEK is a semi-crystalline thermoplastic that operates at extremely high temperatures—500°F (260° C) long-term and 600°F (315° C) short term. An extrudable material, PEEK offers one of the lightest strength to weight ratios available in a composite.

Glenair Composite Connector and Accessory Application Design Considerations

Cost Comparison and Temperature Resistance

For many people, “plastic” means “cheap and breakable.” But when engineers search for new ways to enhance weight savings, corrosion resistance, shock and vibration dampening and stealth they immediately turn to plastic—the only alternative material capable of meeting, and beating, the established performance levels of aluminum, brass, titanium and steel.

The name “plastic” refers to the ability to form or shape a material, or to the moldability a material adopts under forces such as pressure or heat. Engineers often use the term “polymer” when referring to plastic materials, because it more clearly describes how many (poly) chemical units (mers) form up in complex chains to create modern plastic resins. “Thermoplastics” are polymer materials that melt to a liquid when heated and form into a hard, dimensionally stable shape when cooled.

Thermoplastic polymers are created by subjecting various chemical and petroleum-

The glass transition temperature, or the point at which the heated resin will soften, varies from material to material. Extremely high-heat applications, such as engine sensors, are generally considered to be ill-suited for composites.

based ingredients to heat and pressure in sealed vessels. Specific chemical additives control how the polymer is formed and contribute to its performance in such areas as surface hardness and flame resistance. The process of mixing base materials with chemical additives to create specific types of plastic resins is called “polymerization.” The resulting plastic materials can be classified in various ways—by chemical or physical structure, by strength or thermal performance and by optical or electrical properties. Thermal properties are extremely important when selecting plastic materials for use in high-performance applications. Composite glass transition temperature (the point at which the heated material softens) will dictate whether or not the plastic is suitable for use in high-heat applications such as adjacent to an engine or other heat source. But other properties, such as its specific gravity, hardness, refractive index, dielectric strength, conductivity, chemical resistance, UV and flame resistance are also critical in deciding which recipe of resins, fibers and additives will be selected for a particular project.

Temperature resistance can be measured in a variety of ways: melt temperature, heat deflection temperature, glass transition temperature, and continuous use temperature. The resins that offer the highest capabilities in each of these categories are often the most expensive, but typically offer the lowest lifetime cost because of enhanced durability and strength. Two of the top thermal performers, Polyetheretherketone (PEEK) and high-temperature ETFE, are high cost materials, but exceptional performers over the long run.

Additives can be used to increase flame retardancy, to improve lubricity or, in the case of pigments, simply to change the color of the final product. Again, material costs can rise with the addition of chemical compounds that contribute to improved performance. In terms of cost, thermoplastic resins can be arranged into three basic categories:

- Low cost/commodity resins with large volume market costs of less than \$1.50/lb
- Medium cost/engineering resins that fall between \$1.50-\$3.00/lb
- High cost/high temperature resistant resins that usually cost above \$3.00/lb.

Re-Designing Interconnect Systems for Composite Thermoplastics

Interconnect products made of composite materials offer significant advantages over steel or aluminum. They're lighter. They don't rust. They don't loosen under vibration. They can hide from radar. Yet the ability to design composite components that take advantage of these properties while still meeting form, fit and function requirements is no simple task.

Connector accessories, no matter the material, must thread onto the back of connectors. Intercompatibility with other components, whether composite or metal, is critical. Composite component design is further complicated due to the unique strengths and weakness of the material. Abrupt changes in wall thicknesses, for example, can lead to stress problems in both manufacture and use. Sharp, un-radiused angles can create stress and cause cracking. The length, shape, orientation and distribution of reinforcing fibers is also a critical concern, as is the impact of other additives, such as colorizers and flame retardants, on the behavior of the material during manufacture and use.

Interconnect systems designers continue to specify composites, despite the complications of the design and manufacturing process. The weight savings, corrosion resistance and other significant advantages of composites represent real, out-of-pocket savings in fuel consumption and lifetime system maintenance for a broad range of air, sea and space applications.

Special Applications of Engineering Plastics: Flexible Tubing

Most of the products in this catalog are made from glass-filled thermoplastic resins, such as PEI (polyetherimide). These Glenair interconnect components—connectors, junction boxes, backshells and so on—are produced in an injection molding process that results in products that are known for their toughness, damage-resistance, dimensional stability and strength. But other formulas of engineering plastics, such as ETFE (ethylene tetrafluorethylene), are also widely applied by Glenair to produce a very different class of products: flexible convoluted tubing.

Unlike glass-filled thermoplastics that produce rigid parts, ETFE, FEP, and other high-temperature plastics used by Glenair in tubing fabrication produce products that are known for their folding endurance, or the number of times the material can be bent or flexed before experiencing failure. Used in wire-protection applications where a rigid, jacketed cable would experience rapid failure, flexible plastic tubing delivers outstanding performance and durability.

Glenair specializes in the manufacture of ruggedized plastic tubing for shipboard, aircraft and ground applications, and offers the world's broadest range of environmental, mechanical and EMI hardened solutions. Our recently expanded convoluted tubing and conduit manufacturing facility in Glendale is a state-of-the-art plant with every step in the tubing extrusion and finishing process centralized under one roof.

Glenair Composite Connector and Accessory Standard Materials and Finishes

The following standard materials are used for the majority of Glenair's composite products. However, components are not limited to those listed but are representative of the elements used in Glenair's composite products.

Component	Material	Specification
Bodies, clamps, Saddles, coupling nuts, protective covers, etc.	Composite	AIR 4567, AS85049 ASTM D 5205
Hardware: Such as screws, washers, rivets, wire rope, sash chain, band straps, etc.	Corrosion Resisting Steel	QQ-S-763 (300 Series)
Elastomeric seals: Such as o-rings, cable jacket seals, grommets, etc.	Silicone or Fluorosilicone	ZZ-R-765 or MIL-R-25988
Anti-friction and thrust washers	Teflon	TFE

Standard Finishes

FINISH DETAILS		
SYM	MATERIAL	FINISH
XO	Composite Thermoplastic	No Plating, Natural
XB		No Plating, Black
XZN		Conductive, Zinc Nickel, Black
XM		Conductive, Electroless Nickel
XMT		Conductive, Ni-PTFE <i>1000 Hour Grey™</i>
XW		Conductive, Cadmium O.D. Over Electroless Nickel

Locking Compound

Glenair recommends
ND VIBRA-TITE® Formula 3
Thread Locking Compound
for customers who choose to lock or seal
fasteners used on composite products.

Available from ND Industries
(www.ndindustries.com), this product is
non-reactive to composite resins

1000 Hour Grey™ Ni-PTFE Nickel Fluorocarbon Polymer

The MIL-DTL-38999 Rev L detail specification lists Nickel Fluorocarbon Polymer as a qualified Cadmium free plating alternative. This RoHS compliant plating formula is now available on composite interconnect products from Glenair and offers the following benefits in harsh-environment applications:

- 2000+ hour salt spray
- Cadmium free
- Outstanding mating lubricity
- Hexavalent Chromium free
- 500+ mating cycles
- Non-Magnetic

RoHS Compliant Plating Option for Composite Thermoplastic Connectors and Accessories

The 30 May 2008 MIL-DTL-38999 Rev L specification provides guidance on the use of alternative parts with less hazardous or nonhazardous materials. In this regard, the specification provides for a number of alternative plating materials. Users are directed to select the least hazardous plating material that meets the form, fit and function requirements of their application.

Glenair would like to draw our customer's attention to one of the finish options from this specification that conforms to this guidance:

T – Environment resisting Nickel fluorocarbon polymer. Conductive Nickel with fluorocarbon polymer additives over a suitable underplate to withstand 500 hours of dynamic salt spray testing.

This MIL-DTL-38999L "T" plating solution is cadmium and hexavalent chromium free, which allows it to be defined as RoHS compliant. NOTE: as of this printing the SAE AS85049 committee has not yet defined plating codes for this finish.

Glenair has developed its own Ni-PTFE surface finish that meets all the D38999 requirements but radically outperforms standard nickel fluorocarbon polymer finishes in the most important areas including an amazing 2000 hours dynamic salt spray resistance when plated on composite parts.

This Glenair nickel fluorocarbon polymer plating has been assigned the **XMT** code in the plating tables in this composite catalog. Here are just some of the key performance attributes:

Temperature Resistance: Glenair's **XMT Ni-PTFE 1000 Hour Grey™** finish is rated from -65°C to +175°C.

Plating adhesion: When tested as specified in 4.5.5, there shall be no blistering, peeling, flaking or separation of plating or other damage detrimental to the operation of the part.

Glenair Nickel-PTFE 1,000 Hour Grey™ RoHS Compliant Plating is Now Available for All Composite Connector and Accessory Products.

Dissimilar metals and compatible couples: The 1000 Hour Grey™ finish satisfies prohibitions against dissimilar metal coupling as specified in MIL-STD-889.

Shell-to-shell conductivity (millivolts): The **XMT** finish is rated at 2.5 millivolt drop potential.

Sulfur Dioxide Resistance: The **XMT** finish passes the requisite 336 hours resistance to Sulfur Dioxide.

Please note that **XMT** may also be applied to aluminum alloy and stainless steel, in which case the composite marker "X" is dropped and the plating code changes to **MT**.

Table I Front End Dimensional Details

**NOTES:**

1. Connector shell size designations within are for reference only; do not use in part numbers.
2. Metric dimensions (mm) are in parentheses and are for reference only. (1 inch = 25.4 mm)
3. Consult factory for accessory interface data not listed.
4. Use Glenair 600-091 or 600-157 tool to tighten coupling nut. Rubber jaw pliers or strap wrench may damage the parts.

Connector-Backshell Interface Index

These lists of specifications, associated connector manufacturer part numbers, and common rear accessory interface designators DO NOT imply qualification status of the manufacturers indicated for each specification series. The listings are only for the identification of

common interface data under the applicable Connector Designator symbol, an essential element used in Glenair's accessory part number development. For connector manufacturer part number series not shown, please consult factory.

Connector Manufacturers Reference

This index of USA and international connector manufacturers provides a cross-reference of manufacturers' proprietary series designations to applicable specifications. This information does not imply qualification status but serves to indicate that the manufacturers' series is "in conformance with" the noted

specifications or documents. The symbols in the Connector Designator column are an essential element in Glenair's accessory part number developments. For connector manufacturers' part number series not shown in these listings, please consult factory for applicable accessory part numbers.

Shield Termination Styles for Glenair Composite EMI/RFI Backshells

RFI/EMI Backshell Shield Termination Styles

Conductive composite backshells are designed to terminate cable shielding and provide a low electrical resistant ground path. Various shield termination styles are available to match the electrical requirements of different application environments. All Glenair shield termination styles meet the shell conductivity requirements of AS85049. Standard self-locking as well as G-Load coupling styles are available for selected styles.

Reduced Weight and Zero Corrosion for Harsh Environment Interconnect Applications

Hundreds of Military Standard and Commercial Connector Accessories Tooled, Stocked and Ready for Shipment.

Composite connector accessories offer a wide range of benefits to the interconnect engineer, including corrosion resistance, vibration dampening, weight reduction and the reduction of magnetic signatures—a critical requirement in stealth applications.

Glenair composite connector accessories are ideally suited for use in harsh environments where resistance to high temperatures, outgassing, corrosive

fluids, fire, shock and vibration is required. Materials include Ultem® 2300 and other glass filled composite thermoplastics. Glenair composite accessories are ASTM E595 space rated, and are qualified to the shock, vibration, thread strength and bend moment requirements of MIL-DTL-38999 and AS85049. These materials also meet stringent EMI/RFI/HIRF and indirect lightning strike performance specifications.

Backshells Available to Fit Virtually All Military Standard and Commercial Connectors

Lightweight Components Withstand Shock, Temperature Cycling and Vibration

Conductive EMC Surface Finishes Including: Selectively Plated and RoHS Compliant Styles

EMI/RFI Shield Termination, Environmental Sealing and Strain-Relief Backshells for All Popular Connector Types and Styles

Errata

Catalog contents—including part numbers, materials and dimensions—are accurate to the best of our ability when we go to print. Even so, customers are advised to consult the factory for the latest specifications, particularly to confirm critical dimensions such as connector lengths, threads, and so on. When errors or mistakes are brought to our attention, corrected content is posted immediately to our website: www.glenair.com.

Figure 1

Glenair Shield Sock Assemblies Offer Fast and Trouble-Free Termination of EMI Shielding:

For Swing-Arm type shield sock backshells, choose Straight, 45° or 90° angle, and tighten screws to lock arms in place. For standard shield socks, ignore this step. For styles equipped with strain relief clamps, leave the saddle clamp hardware loose.

Next, insert the wire bundle into the backshell to determine if the braid transition angle from the backshell to wire bundle is less than 45°. If it is less than 45°, build up the wire bundle with tape and re-insert wire bundle into backshell to support the transition of overall braid from the backshell to the wire bundle.

Loosely assembly the adapter to the connector and push back the backshell braid. Insert the wire bundle into the adapter and bottom it against the connector. Holding the cable, mark or tag the location where the shield support ring (Glenair Part Number 687-749) will be located. This distance may vary depending on your technique and the flexibility of the wire bundle immediately to the rear of the saddles (Figure 1).

Figure 2

Figure 3

Composite Thermoplastic Shield Sock Assembly Procedure

At the marked location, near the shield support ring, wrap tape around wire bundle for snug fit of shield support ring (Figure 1). Tape wrap is optional.

You can then slide the overall braid from the wire bundle side over the shield support ring, trimming braid ends and tucking extra braid underneath itself for a clean appearance.

For pin connectors, slide the backshell forward, and hand tighten backshell to connector. Then, evenly space shield pigtails (Figure 3) or solder sleeve pigtails (Figure 4) around the shield support ring. Cut the pigtails so that they extend slightly beyond end of shield support ring.

Bring the shield sock from backshell and completely cover the pigtails and support ring. Trim and fold the braid as shown in Figure 2. Lace tie the shield adjacent to support ring ends.

Figure 4

Install Glenair's *Band-it*® band (600-052) between the lace ties onto the center of the support ring as shown in Figure 2. The hand banding tool (600-058) or pneumatic banding tool (600-067) is used for this banding process.

Next, wrap the shield support ring assembly with high temperature tape. Place lacing cord, high temperature tape, or high temperature plastic Ty-Straps on the braid transition to the rear of the backshell to secure the overbraid on wire bundle. If you wish, you can cover the overbraid with 102-080 braid sock.

Tighten the adapter to the connector using established torque values with Glenair 600-091 or 600-157 composite hex coupling wrench and related tooling accessories. Where applicable, secure strain relief saddles onto the wire bundle using TG69 soft jaw pliers. Torque saddle screws to established values. Teflon tape wrap or AS85049/127 bushing strips may be used as needed to cushion the braid sock under the saddle clamps.

With these few steps, your Shield Sock installation is complete!

NOTES

- Assembly identified with manufacturer's name and part number, space permitting.
- Glenair Series 600 Backshell Assembly Tools are recommended for assembly and installation.
- 700-001S**-0 shrink boot supplied with S option. For S and T configurations only.
- Entry codes are applicable for S and T configurations only.
- Material/Finish:
 Clamp Body - High grade engineering thermoplastic/Table III.
 Coupling Nut - High grade engineering thermoplastic/Unplated.
 Anti-Rotation De vice - Corrosion resistant material.
 Shield - See part number development.

1. After terminating shields, tighten the backshell to the connector and build-up the outside diameter of the wire bundle with AS85049/127 bushing strip to achieve a moderately snug fit against the saddle-bars.
2. Position the saddle-bars on the built-up wire bundle. Then, using Glenair TG69 Soft Jaw pliers, hold the saddle-bars down firmly and evenly against the wire bundle. (See figure 1)
3. Continuing to hold down the saddle bars, tighten clamp screws. Alternate between insertion of both screws so that the saddle bars compress against the cable evenly. Stop when the saddle-bars bottom against the arms of the clamp assembly. (See figure 2)
4. Tighten screws to correct torque values

The Right Backshell for the Job...

...and the Right Tool for the Job

Glenair recommends the use of the appropriate sized series 600-157 or series 600-091 composite hex coupling wrench to prevent damage to the composite backshell coupling nut. The wrench is used during assembly of the backshell to the rear end of the connector.

The use of incorrect types and styles of coupling nut wrenches, such as slip-jaw pliers, will result in damage to the composite coupling nut up to and including failure due to cracking. So don't do it. You picked the right backshell, now pick up the right tool.

SELF-LOCKING	
ROTATABLE COUPLING	

- ### NOTES
- Assembly identified with manufacturer's name and part number, space permitting.
 - Glenair 600 Series Backshell Assembly Tools are recommended for assembly and installation.
 - O-Ring supplied with connector designator F & H only. O-Ring is not supplied with connector designator A or with drain hole option.
 - Material/Finish:
 Coupling Nut, Adapter and Split Ring – High temperature engineering thermoplastic/See Table II.
 Follower – Brass/Electroless nickel.
 O-Ring – Fluorosilicone/NA.
 Shrink Boot – See 770-001S** Shrink Boot product page for details.
 Termination Band – SST/Passivated.
 Crimp Ring – Copper/Tin plated.
 Braid – See Table III.

NOTES

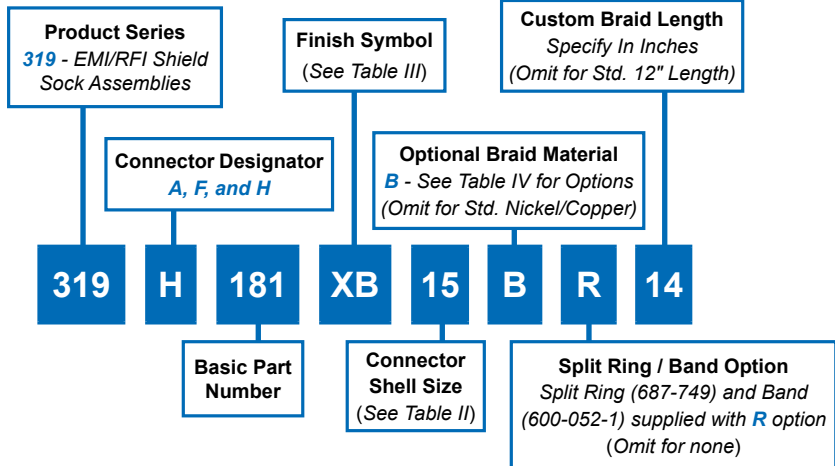

- See Table I in Intro for front-end dimensional details.
- Glenair Series 600 Assembly Tools are recommended for assembly and installation.
- Swing arm locks in 45° increments, shell size 09 through 25. Additional positioning increments are manufacturer's option.
- Screw is captive to the arm when disengaged. When tightened, the screw will not protrude into the inside surfaces.
- Material/Finish:
Clamp body, coupling nut, saddles - High grade thermoplastic/See Table III.
Clamp hardware - CRES/Passivate
Shield - See Table IV.
Interface ring and shroud - Table III.
Crimp ring - Copper/Tin plated.
- Add MOD Code -475 to end of part number for use with Series II connector. Backshell to be supplied less shroud.
- Metric dimensions (mm) indicated in parentheses.

NOTES

- See Table I in Intro for front-end dimensional details.
- Metric dimensions (mm) are in parentheses.
- See composite thermoplastic shield sock assembly procedure for detailed installation instructions.
- Coupling nut supplied unplated.
- Glenair Series 600 Assembly Tools are recommended for installation.
- Swing arm locks in 45° increments, shell size 09 through 25. Additional positioning increments are manufacturer's option.
- Screw is captive to the body when disengaged. When tightened, the screw will not protrude into the surface.
- Clamps accommodate MIL-DTL-38999, Series I, II, III and IV connectors, interface IAW AS85049, Figure 3. Add mod code -475 to end of part number for use with Series II connectors. Backshell to be supplied less shroud.
- Material/Finish:
 Clamp body, coupling nut, saddles - High grade engineering thermoplastic/See Table III.
 Clamp hardware - CRES/Passivate
 Adapter (EMI/RFI) - Brass/Table III.
 Anti-rotation device - Corrosion resistant material.
 Shield - Copper/Nickel plate.
 Interface ring and shroud - Table III.
 Crimp ring - Copper/Tin plated.

Series 360 Non-Environmental Backshell Assembly Instructions

The following suggested procedure serves as a guide for proper assembly and installation of Glenair Series 360 Non-Environmental Composite Backshells. It is recommended that trial samples of appropriate cables or wire bundles be used to determine proper trim dimensions of the individual conductors and cable jackets, if applicable.

NOTE: As with any electrical connector assembly procedure, be sure to use the proper tools. For convenient, reliable assembly of the connectors and backshells, it is suggested that Glenair's connector holding tools, strap wrenches and connector pliers be used.

1. Temporarily assemble backshell (1) to connector.
2. If cable is jacketed, insert cable into backshell (1) and bottom against connector. Hold cable in position and mark cable jacket at rear end of backshell.
3. Remove backshell from connector and stage the backshell, together with the strain relief clamp (2), up the cable for installation after wires are terminated to the connector contacts.
4. Trim cable jacket at a point 1/2 inch toward connector from mark made in step two above.
5. Prepare and terminate cable conductors in accordance with established practices.
6. Thread backshell (1) onto the connector and tighten securely. Glenair recommends the use of the appropriate sized series 600-157 composite hex coupling wrench (3) to prevent damage to the composite backshell coupling nut. For added convenience in assembly, an appropriately sized series 600-005 connector holding tool (4) is recommended, as well as Glenair digital torque wrench (5).
7. Assemble strain relief (2) to backshell and tighten securely. Tighten strain relief saddles securely on cable or harness (see saddle clamp assembly procedure).

Series 370 Environmental Backshell Assembly Instructions

The following suggested procedure serves as a guide for proper assembly and installation of straight Glenair Series 370 Cable Sealing Backshells for use with jacketed cables. It is recommended that trial samples of appropriate cables be used to determine proper trim dimensions of the cable jacket and individual conductors.

NOTE: As with any electrical connector assembly procedure, be sure to use the proper tools. For convenient reliable assembly of the connector and backshell, it is suggested that Glenair's connector holding tools, strap wrenches and connector pliers be used.

1. Temporarily assemble backshell (1) to connector.
2. Remove the strain relief clamp (3) and cable sealing o-ring (2) from the backshell and stage them in the order shown up the cable for installation after wires are terminated to the connector contacts.
3. Insert cable into backshell (1) and bottom against connector. Hold cable in position and mark cable jacket at rear end of backshell.
4. Remove backshell from connector and place on cable with components from step two above.
5. Trim cable jacket at a point 3/4 inch toward connector from mark made in step two above.
6. Prepare and terminate wires in accordance with established practices.
7. Thread backshell (1) onto the connector and tighten securely. Glenair recommends the use of the appropriate sized series 600-157 composite hex coupling wrench (4) to prevent damage to the composite backshell coupling nut. For added convenience in assembly, an appropriately sized series 600-005 connector holding tool (5) is recommended, as well as Glenair digital torque wrench (6).
8. Slide washer (if supplied) and O-ring (2) on to backshell and tighten strain relief clamp (3) firmly in place
9. If provided, tighten saddle bar clamps until they bottom against saddle clamp ears (see saddle clamp assembly procedure).

36	120

The following suggested procedure serves as a guide for the proper assembly and installation of Glenair Series 380 EMI/RFI Non-Environmental Backshells (Type D individual wire shield termination). It is recommended that trial samples of appropriate cables or harnesses be used to determine proper trim dimensions of the outer shield and individual conductors.

NOTE: As with any electrical connector assembly procedure, be sure to use the proper tools. For convenient, reliable assembly of the connector and backshell, it is suggested that Glenair's connector holding tools, strap wrenches and connector pliers be used.

1. Temporarily assemble backshell (1) to connector.
2. Remove strain relief clamp (3) from adapter (1) and stage it, along with the ground ring (2) in the sequence pictured, up the cable for installation after wires are terminated to the connector contacts.
3. Insert cable into adapter (1), and bottom against connector. Hold cable in position and mark outer shield at rear end of adapter (1).
4. Remove adapter (1) from connector and place on cable with items in step two above.
5. Trim cable jacket at a point 3/4 inch toward connector from mark made in step three above, exposing individual conductors.
6. Trim outer shield at mark made in step three above (this procedure is for termination of individually shielded conductors only).
7. Extract shield pigtail from individual conductors. Fold back and tape or tie pigtails flat against the wire bundle.
8. Prepare and terminate contacts to individual conductors in accordance with established practices. (Crimp or solder in place)
9. Slide adapter (1) forward to connector, and tighten securely using appropriate tools.
10. Move the tapered ground ring forward near the rear of the adapter. Untie individual pigtails, and flare back over ground ring as to evenly disperse pigtails around the circumference of the ring. Tie or tape pigtails back to bundle allowing for approx. 1/2 inch of slack.
11. Push ground ring forward and into the tapered counter-bore at the rear of the backshell adapter (1).
12. Thread strain relief clamp (3) onto the adapter (1) and tighten securely.
13. Tighten strain relief saddle bar clamps until they bottom against saddle ears (see saddle clamp assembly procedure). This will provide good shielding and bonding to the adapter shell. (This same procedure can also be utilized for overall shield).

A

1. Temporarily assemble backshell to connector.
2. If cable is jacketed, insert cable into backshell and bottom against connector. Using the end of the backshell as a guide, mark the location of solder sleeves and/or pigtail breakouts on the cable.
3. Disassemble backshell from connector and stage it up the cable for installation after wire termination is complete.
4. Trim cable jacket at marked location from step 2 above and pull out pigtails and/or apply solder sleeves. Terminate contacts to wires in accordance with established practices.
5. Insert contacts into connector in accordance with established practices.
6. Pull braid forward and wrap the knit braid around individual wires in groups of two or three, ensuring that the knitmesh braid is in contact with all exposed braids (see cross-section illustration).
7. Pull the knit braid tightly around the wire bundle and pass through one of the holes in the backshell.
8. Screw the backshell partially onto the connector, ensuring that the interface teeth *do not* engage—allowing the backshell to rotate freely.

Knit Braid Backshell Assembly Instructions

9. Rotate the backshell so that the knit braid is drawn into the backshell. Maintain firm pressure on the free knit braid during this step to provide tight coverage. Continue rotating until the knit braid is wound tightly into the backshell and further rotation becomes difficult.
10. Cut the braid flush with the backshell O.D. Rotate the backshell body 1/4 turn to ensure that the end of the braid is out of sight.
11. Tighten the backshell fully onto the connector using established procedures and torque values.

**Series 380 (Type E) Multi-Shield EMI/RFI
Non-Environmental
Backshell Assembly Instructions**

The following suggested procedure serves as a guide for the proper assembly and installation of Glenair EMI/RFI Non-Environmental Backshells (Type E shield termination). It is recommended that trial samples of appropriate cables or harnesses be used to determine proper trim dimensions of the outer shield and individual conductors. This procedure is for the three ring style.

NOTE: *As with any electrical connector assembly procedure, be sure to use the proper tools. For convenient, reliable assembly of the connector and backshell, it is suggested that Glenair's connector holding tools, strap wrenches and connector pliers be used.*

1. Temporarily assemble backshell (1) to connector.
2. Remove backshell from connector and stage it, along with the ground rings (2), (3), (4) and strain relief clamp (2), up the cable for installation after wires are terminated to the connector contacts.
3. Insert cable or harness into backshell (1) and bottom against connector. Hold cable in position and mark outer shield at rear end of backshell (1).
4. Remove backshell from connector and place on cable with items in step two above.
5. Trim outer shield at mark made in step three above.
6. Extract shield pigtail from individual conductor's. Tape or tie pigtails to the bundle.
7. Prepare and terminate contacts to individual conductors in accordance with established practices. (Crimp or solder in place.)
8. Slide backshell (1) forward to connector, and tighten securely.
9. Remove tape or untie pigtails from bundle. Slide ground ring (2) forward to flared-out pigtails. Fold pigtails back over ground ring (2) tie back to bundle leaving about 1/2" to 1" slack.
10. Bring ground ring (3) forward to overall braid, fold braid back over ring (3), push forward onto ring (2). Slide ground ring (4) onto overall braid and onto ring (3). . . push all three rings forward into the counter bore at the rear of backshell (1).
11. Thread backshell (1) onto the connector and tighten securely. Glenair recommends the use of the appropriate sized series 600-157 composite hex coupling wrench (6) to prevent damage to the composite backshell coupling nut. For added convenience in assembly, an appropriately sized series 600-005 connector holding tool (7) is recommended, as well as Glenair digital torque wrench (8). Tighten strain relief saddles securely on cable or harness (see saddle clamp assembly procedure). This will then provide a good ground or bonding joint for both the individual and over-all shields. (For the two ring style, ground ring (3) is omitted, and above steps I or J is utilized with either overall or individual braids).

Series 390 (Single Shield) EMI/RFI
Environmental Backshell
Assembly Instructions

The following suggested procedure serves as a guide for proper assembly and installation of straight Glenair Series 390 EMI/RFI Cable Sealing Backshells for use with jacketed cables and a single overall EMI shield. It is recommended that trial samples of appropriate cables be used to determine proper trim dimensions of the cable jacket, individual conductors and shielding.

NOTE: As with any electrical connector assembly procedure, be sure to use the proper tools. For convenient reliable assembly of the connector and backshell, it is suggested that Glenair's connector holding tools, strap wrenches and connector pliers be used.

1. Temporarily assemble backshell (1) to connector.
2. Place the ground ring (2), adapter, o-ring seal (plus washer if provided) and strain relief clamp on the cable in the sequence shown. You are staging these components on the cable for installation after wires are terminated to the connector contacts.
3. Insert cable into backshell (1) and bottom against connector. Hold cable in position and mark cable jacket at rear end of backshell.
4. Remove backshell from connector and place on cable with components from step two above
5. Trim cable jacket at a point 3/4 inch toward connector from mark made in step two above, exposing cable shielding.
6. Prepare and terminate wires in accordance with established practices.
7. Assemble backshell (1) to connector and tighten securely using appropriate tools.
8. Flare EMI shield completely over grounding ring. Manipulate shield into the conical counter-bore in the adapter and capture in place with the ground ring.
9. Tighten adapter in place using TG70 strap wrench.
10. Slide O-ring and washer (if provided) against adapter (3).
11. Thread strain relief clamp (5) firmly in place.
12. Tighten saddle bar clamps until they bottom against saddle clamp ears (see saddle clamp assembly procedure).

TABLE III: FINISH

Symbol	Material / Finish Description
XM	Coupling Nut: Aluminum / Electroless Nickel Body: Thermoplastic / Black Color
XMT	Coupling Nut: Aluminum / 1000 Hour Grey™ Body: Thermoplastic / Black Color
XW	Coupling Nut: Aluminum / Cad O.D. over Electroless Nickel Body: Thermoplastic / Black Color

A

1. Temporarily assemble backshell to connector.
2. If cable is jacketed, insert cable into backshell and bottom against connector. Using the end of the backshell as a guide, mark the location of solder sleeves and/or pigtail breakouts on the cable.
3. Remove backshell from connector and stage it up the cable for installation after wire termination is complete.
4. Trim cable jacket at marked location from step 2 above and pull out pigtails and/or apply solder sleeves. Terminate contacts to wires in accordance with established practices.
5. Evenly distribute shields around backshell banding platform.
6. Secure shields to banding platform via Band-It band. See banding assembly procedure for details.
7. Apply silicone tape to band area (if applicable).
8. Apply Glenair 770-001 heat moldable shrink boot to terminated banding area for added environmental protection and strain relief. See heat moldable product user instructions for details.

APPLICATION NOTES

- Metric dimensions (mm) are in parentheses and are for reference only.
- Glenair series 600 Backshell assembly Tools are recommended for assembly and installation.
- Swing Arm locks in 45° increments— Sizes 08 thru 24, additional positioning increments are manufacturer's option.
- Captive Screw can remain engaged to the body when positioning the Arm. When tightened, the Screw shall not protrude into the inside surfaces.
- Coupling nut supplied unplated.
- Consult factory for additional entry sizes available.
- See Table I in Intro for front-end dimensional details.

- Standard Material Fluid Resistant Cross-Linked Elastomer per VG95343 Part 6
- Low Toxicity Material Fluid Resistant Cross-Linked Elastomer per NAVSEA 5617649

APPLICATION NOTES

1. When the minimum number of conductors are used, wire bundle/cable may require build-up to Cr² max.
2. Sizes 00 to 02 do not contain eyelet.
3. Refer to GAP-070 for shrink boot installation guide on composite shells.

Glenair Environmental Shrink-Boot Adapters and Series 770 Boots

Easy-to-use, semi-rigid heat-shrinkable boots offer excellent electrical, mechanical and environmental protection. Made from flame-retardant elastomeric material, these adhesive-lined boots are resistant to high temperature and chemicals. Shrink boot material is flame retardant, and the "2" option can be specified for compliance to NES smoke and toxicity requirements.

Heating the boot causes the boot to shrink while an adhesive lining bonds the boot to the connector and cable and fills small gaps for a complete seal. Choose straight cable exit or right angle exit.

Heat-shrinkable boots are ideal for environmental protection of connector wire terminations in most harsh environments including tactical military equipment. The products also supply a modicum of strain-relief.

Glenair offers a full range of sizes and shapes to accommodate mil-standard circular and rectangular connectors and backshells. Boots are also available for Series 80 Mighty Mouse connectors and accessories.

This catalog contains a wide selection of connector accessory backshells that accommodate shrink boots. These products may now be ordered with Glenair Series 770 Shrink Boots:

A Complete Range of Glenair Composite Shrink Boot Adapters	Part Number	Page
Shrink Boot Adapter with Rotatable Coupling Nut ; Straight, 45° and 90°	310-045	A-2
Shrink Boot Adapter with Direct Coupling - Straight	310-017	A-4
Lamp Base EMI/RFI Environmental Adapter with Shrink Boot Porch and Direct Coupling - Straight	311-063	A-8
EMI/RFI Banding Backshell Shield Sock with Shrink Boot Porch and Self Locking Rotatable Coupling - Straight, 45° and Ultra Low Profile 90°. Uses Micro Band to Attach Shield	319-134	A-16
TEMI/RFI Shield Sock Strain Relief with Shrink Boot Porch and Self Locking Rotatable Coupling - Straight, 45° and 90°	319-136	A-18
Knit Braid Style EMI/RFI O-Ring Equipped Shield Termination Backshell with Shrink Boot Adapter and Rotatable Coupling	380-132	A-54
EMI/RFI Micro-Banding Backshell with Shrink Boot Groove and Self Locking Rotatable Coupling - Straight, 45° and Ultra Low Profile 90°	440-144	A-70
EMI/RFI Banding Backshell with Shrink Boot Groove and Self Locking Rotatable Coupling - Standard Profile Straight, 45° and 90°	447-325	A-72
EMI/RFI Micro-Banding Backshell with Shrink Boot Groove and Self Locking Rotatable Coupling - Standard Profile Straight, 45° and 90°	447-326	A-74
EMI/RFI Banding Backshell with Qwik-Ty Strain Relief and Shrink Boot Groove - Standard Profile Straight and 90°	447-327	A-76
Shrink Boot Conduit Fitting for Glenair Series 74 Helical Convoluted Tubing	712S269	C-22

Protect your Connector Investment with Protective Covers and Dummy Storage Receptacles

Glenair composite protective covers reduce weight while providing reliable protection of connectors and contacts

Glenair makes a full range of composite plug and receptacle covers for 5015, 28840, 38999 and 83723 series connectors. Protective covers are a critical component in interconnect systems where maintenance and test cycles can lead to damage of exposed connectors. Customers may select from split and solid ring designs equipped with rope, sash and bead style chains made from either nylon or stainless steel. Conductive and nonconductive

plating options are available, to match the conductivity and impedance requirements of the application and the connector. All covers meet the intermateability requirements for the specified connector series. For connector series not shown in this catalog please consult the factory. For a listing of protective covers in stock, please see our *Same Day Inventory listing* on our website at www.glenair.com. Samples are always available upon request.

B

Electrically conductive RFI/EMI covers

Non-conductive versions available

*MIL-DTL-5015, MIL-DTL-38999, MIL-DTL-28840,
and MIL-DTL-83723 designs*

Lower weight than comparable metal components

100% corrosion free materials

Complete range of ring styles and attachment options

Errata

Catalog contents—including part numbers, materials and dimensions—are accurate to the best of our ability when we go to print. Even so, customers are advised to consult the factory for the latest specifications, particularly to confirm critical dimensions such as connector interface dimensions, threads, and so on. When errors or mistakes are brought to our attention, corrected content is posted immediately to our website: www.glenair.com.

Custom Conduit Assemblies

Wired, Terminated and Tested—Ready for Use

Glenair's complete capability in wire protection systems extends to the design, manufacture and test of custom conduit assemblies—built to your exact specifications. Our turn-key service includes everything from engineering and design assistance to the on-time delivery of completely wired, terminated and tested assemblies—ready for immediate use.

Glenair's has established an enviable reputation for consistently high quality. Regardless of simplicity or complexity, or whether quantities are large or small, the same high standards of quality assurance are applied uniformly. Our ISO 9001:2000 and AS9100:2004 Rev B certified quality system and strict adherence to military and commercial testing standards ensures each conduit assembly is thoroughly inspected at each stage of the process. Each system undergoes a final inspection process which includes appearance, identification, dielectric, continuity, and insulation tests

conducted on a 100% basis in preparation for final customer source inspection.

Glenair has built electrical, optical and hybrid assemblies for military, commercial and industrial customers since the 1950's.

Our expertise extends from simple point to point assemblies to complex multi-branch and fiber optic systems. Today, we're building everything from overmolded fiber optic assemblies for marine use, to wheel-well assemblies for the world's leading aircraft manufacturers.

Our in-house braiding and sleeving capabilities allow us to build both repairable and non-repairable assemblies suitable for use in harsh electromagnetic and environmental conditions. We offer a

complete range of jacketing, shielding and braided protective covering options including NBC (nuclear, biological, chemical) materials.

From one-of-a-kind conduit systems, to high volume mass production requirements, Glenair delivers with consistent quality, on-time delivery and reliable customer service.

Convulsed Tubing Wire Protection Systems: Where Flexibility and Field Repairability Meet.

Advanced EMI Shielded Wire Protection Systems for Shipboard, Aerospace, Electric Vehicle and Heavy Equipment Applications

Glenair's Series 74 Helical Convulsed Tubing Systems provide outstanding wire circuit and cable protection for applications that require advanced durability and flexibility compared to standard jacketed cables. The series 74 system features a broad selection of transition fittings and adapters for easy routing and incorporation of industry-standard connectors. Our PEEK™ and Fluoropolymer polymers result in extremely rugged, lightweight enclosures for wiring systems deployed in harsh environment applications. Turnkey wired assemblies can be equipped with a broad range of fittings, jacketing and screening materials.

Convulsed Tubing Service Temperature Ranges of -95°F to +500°F Long Term, +600°F Short Term

Tensile Strength Ratings to 7,000 PSI

*Resistance to Hydraulic Fluids, Fuels, Lubricating Oils,
Solvents and Decontaminating Agents*

Lightweight, Halogen-Free

Crush-Resistant

High-Temperature

Maximum Flexibility

*Broad Range of Conduit and Connector Transitions
and Fittings*

EMI/RFI Shielding Configurations

Broad Range of High-Temperature, Environmental Jacketing

Turnkey, Wired, Terminated and Tested Assemblies

PEEK™ is a trademark of Vitrex plc.
Fluoropolymer is a registered trademark of the DuPont Company.

This selection guide is designed to assist you with the selection of components and planning for installation of Glenair polymer plastic and composite convoluted tubing and fittings. Convoluted tubing wire protection assemblies are made up of lengths of bulk convoluted tubing, and various combinations of conduit fittings and adapters that allow the user to efficiently terminate the tubing and attach the assembly to connectors and other interconnect interfaces. There are three basic tasks in the selection process:

- (1) Specify the size of bulk tubing which meets the volume requirements of the application.
- (2) Specify the style of bulk tubing which meets the environmental, electrical and mechanical requirements of the application.
- (3) Select the transition fittings and connector adapters that satisfy the routing and interconnect requirements of the application.

Step 1: Select Tubing Size

Conduit size is identified by its inside diameter (ID) expressed in inches and fractions. Most of our tubing products range from 3/16 of an inch to 2 inches. The ID is referenced with a numerical size code which is used in the part number.

Convoluted tubing wire protection systems are normally filled to 80% of the inside diameter of the tube. You will need to verify the diameter of the cable or wire bundle to be housed in the tubing before selecting the tubing size in order to insure it adequately accommodates your wiring.

In some applications, such as when the tubing will ultimately be attached to a bulkhead feed-through or a stuffing tube, the diameter of the feed-through fitting needs to be taken into account when selecting the tubing size. Obviously, if the tubing needs to terminate to a one inch feed-through fitting, you should select one inch tubing. In fact, in a well-designed system, the diameter of the conduit, any necessary transition fittings, connector adapters, feed-throughs etc. should all be the same size.

Step 2: Select Tubing Style

Glenair manufactures a wide range of high-temperature tolerant polymer plastic convoluted tubing products, such as PFA, FEP, PTFE, ETFE and PEEK. Each material has specific performance attributes that are summarized in the accompanying table. Selection is most often based on one or more attributes such as crush resistance, strength or cost.

The other decision point in tubing style selection has to do with the addition of outer layers of EMI shielding and/or environmental jacketing to the core material. Braided shielding provides a conductive path for EMI and also adds pull strength to the final assembly. Various flavors of environmental jacketing, summarized in the accompanying table, protect the assembly from moisture and caustic chemicals.

Step 3: Select Transition Fittings and Connector Adapters

Multi-branch convoluted tubing wire protection assemblies utilize various composite plastic transition fittings, in straight, "T," "Y," and "+" configurations, to facilitate routing. The tubing is terminated into the backend of the fitting while the front end

is equipped with an appropriate thread profile and coupler for the attachment of the necessary transition. The assemblies also utilize connector adapters, in straight 45° and 90° configurations, for the incorporation of circular and rectangular connectors.

Selection is easy. The size of the fitting or adapter is indicated with a "dash number" or numeric size code that, just like the tubing, corresponds to the shell size of the part in inches and fractions. The appropriate sized fitting for a

one inch tube, for example, would be a number "32." Conveniently, this is the same number used for one inch bulk tubing. So selection is a simple matter of matching the size code in the fitting part number with the size code of the selected conduit. Your selection of a straight, 45°, 90°, "T," "Y," or "+" configuration part will depend on the routing requirements of your system.

NOTE 1: Glenair recommends the use of our TG70 strap wrench, or appropriately sized 600-157 series holding tools for use fitting-to-fitting, or connector-to-adapter assembly.

NOTE 2: Glenair also recommends the use of torque wrenches to ensure adapters and connectors are mated with the optimal amount of torque.

Conduit-to-Connector adapters allow for easy integration of industry standard interconnects and convulsed tubing.

A Note On Braided Shielding

Glenair is able to provide turnkey convulsed tubing wire protection systems—complete with braided shielding and jacketing. Braided shields are effective at minimizing low frequency interference at audio and RF ranges. Braided shields also provide additional structural integrity while maintaining good flexibility and flex life. In use, the reduction of EMI is dependent upon the signal amplitude and frequency in relation to the many combinations of mesh count, wire diameter and the braid material. Generally, the higher the percentage of braid coverage, the more effective the shield against high-frequency emissions. Available materials include tin-plated copper, nickel-plated copper and tin-plated iron/copper as well as metal-clad composite materials such as AmberStrand®. Depending on the ratio of metal braid to composite plastic, Glenair's composite braided shielding product can reduce the weight of EMI shielding up to 75%.

Glenair takes a systems approach to the design and manufacture of our composite and polymer plastic wire protection systems. The following pages present all the necessary component products to create 100% composite/plastic wire protection systems optimized for the most extreme environmental, mechanical, and electrical performance requirements. Please do not hesitate to contact our factory for free application engineering and assistance in the design of your next assembly.

Convuluted Tubing Material Properties

MATERIAL PROPERTY	PERFLUORO-ALKOXY (PFA)	FLUORINATED ETHYLENE PROPYLENE (FEP)	ETHYLENE TETRA-FLUOROETHYLENE (ETFE)	POLYTETRAFLUOROETHYLENE (PTFE)	POLYVINYLIDENE FLUORIDE (PVDF)	POLYETHER KETONE* (PEEK)
Service Temperature	-95°F/500°F (-71°C/260°C)	-95°F/400°F (-71°C/204°C)	-65°F/310°F (-54°C/154°C)	-95°F/500°F (-71°C/260°C)	-65°F/330°F (-54°C/166°C)	-76°F/392°F (-60°C/200°C)

Introduction to Conduit Interconnect Technologies and Packaging Determining Tubing Size

How to use the tables on this page:

It is possible for a wire bundle to contain wires of all the same size diameter, or a variety of mixed diameters. The gauge provides only the diameter of the conductor, and this information alone is not sufficient to determine required tubing size. Referring to the appropriate wire specification is necessary to establish the overall diameter over the insulation and/or braids.

STEP	ALL WIRES SAME DIAMETER	TWO DIFFERENT WIRE DIAMETERS
1. A bundle containing 30 wires	30 wires @ .045 DIA	15 wires @ .045 DIA 15 wires @ .135 DIA
2. Determine average wire diameter	30 x .045 = 1.35 1.35 = .045 Average 30 Wire Diameter	15 x .045 = .68 15 x .135 = <u>2.03</u> 2.71 2.71 = .090 Average 30 Wire Diameter
3. Using Table I, find factor for 30 wires (6.7), and multiply by average wire diameter	.045 x 6.7 = .3015 Wire Bundle Diameter	.090 x 6.7 = .603 Wire Bundle Diameter
4. Tubing size is determined on Table II. 70% fill is recommended	Size 12 (.305 DIA = 70% Fill)	Size 24 (.607 DIA = 70% Fill)

Number of Wires	1	2	3	4	5	6	7	8	9	10	12	14	16	18	20	24	28	32
Factor	1	2	2.2	2.4	2.7	2.9	3	3.3	3.8	4	4.3	4.6	5	5.3	5.6	6	6.5	6.9

Note: Consult factory for Series 72 Type B tubing.

Metric dimensions (mm) are indicated in parentheses.

About Glenair Series 74 Helical Convuluted Tubing Styles

Glenair offers our polymer plastic Series 74 Helical Convuluted Tubing unshielded or with a variety of braids to meet various electromagnetic shielding requirements. Type A is provided unshielded; Type B unshielded, with a protective outer braided black Dacron® covering; Types C through F define standard combinations of braided metal EMI shielding; Type G unshielded, with an outer elastomeric jacket. Other combinations can be provided upon request.

Glenair Series 74 Helical Convuluted Tubing is manufactured in conformance to SAE-AMS-T-81914, providing the user with standard and thin wall thickness, and a choice of standard or close convolutions. For low-smoke zero-halogen applications that require a high strength and superior crush resistance, Glenair can supply PEEK™ tubing (semicrystalline thermoplastic). The PEEK™ material will be manufactured to Glenair tubing standards.

All of the Glenair convuluted tubing can be supplied either unjacketed or with a variety of elastomeric materials. Other options include: Dual wall i.e., FEP inner liner and FEP outer liner which can be supplied with various combinations of braid shielding between the liners; Reinforcement support spring option for added crush resistance which can be supplied with the Type A through Type G configurations shown; Internal braid shielding; and special processes such as cross-linking (please consult factory).

Packaging

- Long-length orders of 120-100 conduit are subject to carrier weight and box size restrictions. For example, UPS air shipments are currently limited to 50 lbs. per box. Unless otherwise specified, Glenair standard practice is to ship optimal lengths of product based on weight, size, and individual carrier specifications.
- Consult factory for thin-wall, close convolution combination and for PEEK™ and PTFE min/max dimensions.

APPLICATION NOTES

- Metric dimensions (mm) are in parentheses and are for reference only.
- Convulsed tubing size, tubing to be ordered separately (see Series 74 Catalog, Type A Tubing Section, Standard Pitch). Dash 1 configuration accommodates Type B or D Tubing. For PTFE maximum lengths - consult factory.
- Different adapters are necessary to terminate PEEK tubing. Nominal I.D. reduced by approximately .060 (use Suffix P) in P/N development. For permanent termination use 3M Scotch Weld after installing tubing/shielding, see Detail A.

Glenair Composite Braid Doesn't Make the Fire Scout Fly...

...But It Sure Helps

When Northrop Grumman faced the challenge of reducing total system weight of the MQ-8B Fire Scout without sacrificing performance, they turned to their suppliers for help. Glenair suggested replacing the braided metal shielding used in the revolutionary aircraft with our lighter weight composite product. We explained the potential weight savings could be as much as 35% compared to the current base cable harness design, equipped with tin/

copper shielding. The integration of composite EMI/RFI braid would not only reduce weight, but also improve the system's corrosion resistance and durability—all at no added risk to sensitive electronic equipment.

As it turned out, the use of composite shielding reduced the main cable harness assembly by 12.5 Lbs.—not an insignificant amount when reduced fuel fractions and the ability to remain aloft for extended periods are key mission requirements.

Glenair Composite Metal-Clad Lightweight AmberStrand® EMI/RFI Braided Shielding

For many applications, the cable shield is the most important element in controlling EMI. Unfortunately, metal shielding—especially when applied in multiple layers—can be extremely heavy. The opportunity to provide robust EMI shielding at a fraction of the weight is the principal advantage of composite thermoplastic braid made from AmberStrand® material. Transfer impedance test reports demonstrate the effectiveness of the material as compared to conventional metal solutions. Mechanical properties are comparable to other non-metallic materials (see Table I).

EXAMPLE APPLICATION

Glenair Announces:

140 Series EMI/RFI Composite Boxes

Now NAVSEA Approved for use on U.S. Naval Ships

NAVSEA Approved Composite Electrical Enclosures Junction Boxes - Electrical Boxes - Sound-Powered Phones

NAVSEA Approval:

Glenair advanced, corrosion-control composite electrical boxes are now NAVSEA approved for deployment around the fleet. All testing has been completed and NAVSEA is working with NAVSUP Mechanicsburg to introduce the individual boxes and replacement parts to the stock system. For NAVSEA contact information or for the latest procurement information on the NAVSEA 803-6983506 drawing please contact Glenair @ 818-247-6000.

Glenair salutes and extends its thanks to the many officers and sailors who participated in sea trails to evaluate and perfect the NAVSEA composite box conversion project, including the men and women of the:

- USS Geo. Washington (CVN-73)
- USS Theo. Roosevelt (CVN-71)
- USS Barry (DDG-52)
- USS Comstock (LSD-45)
- USS Vella Gulf (CG-72)
- USS Rushmore (LSD-47)
- USS Enterprise (CVN-65)
- USS D. D. Eisenhower (CVN-69)
- USS Curtis Wilbur (DDG54)
- USS John S. McCain (DDG56)
- USS Whidbey Island (LSD-41)
- USS Germantown (LSD-42)
- USS Fort McHenry (LSD-43)
- USS Harpers Ferry (LSD-49)
- USS Pearl Harbor (LSD-52)

Lots of Junction Boxes are Built for use in Harsh, EMI/RFI Applications. Ours are Built to Save You Money.

Glenair is the recognized leader in composite thermoplastic research and development for the interconnect accessory industry. Glenair's lightweight/high-strength CostSaver Composite EMI/RFI Junction Boxes are ideally suited for use in harsh environments where resistance to electromagnetic interference, corrosive fluids,

high temperatures, shock and vibration is a critical requirement.

The boxes are designed to meet the shock and vibration requirements of MIL-S-901D and MIL-STD-167SHIPS. Box materials also meet stringent EMI/RFI/HIRF and indirect lightning strike performance specifications.

Step One: Specification of a Junction Box Assembly Begins with the Selection of the Right Size Box—Both in Terms of the Internal Volume and the External Package Size.

Glenair's CostSaver Composite Junction Boxes are ideally suited for use in harsh environments where weight savings and resistance to electromagnetic interference, corrosive fluids, high temperatures, shock and vibration are critical requirements.

Compared to aluminum, brass or steel boxes, Glenair's "CostSavers" provide equal or improved RFI/EMI protection, with considerable savings in corrosion-related maintenance.

Glenair boxes are outfitted with captive stainless steel cover screws for additional long-term corrosion resistance.

In retrofit applications, select the most efficient size to fit the existing electronics package. More than one box can sometimes be used efficiently if the electronics package can be split between two or more boxes. For new application designs, please consult the factory for advice on maximizing the use of internal package space.

Small Three-Legged Box (Series 140-106)

The latest box design from Glenair is ideally suited for reduced package-size junction box applications such as LED lighting, switches and other single component applications. Designed to accommodate a 3.5 inch internal mounting plate, the three-legged box is currently in use in a wide range of US Navy applications. Three sides of the hexagonal box, as well as the lid, can accommodate bulkhead fittings. Materials and performance ratings are identical to the other boxes in the Glenair composite box line.

Multi-Port Split Shell Box Series

Glenair now produces two configurations of multi-port split shell composite thermoplastic junction boxes, our 140-200 octagonal design box and our 140-203 twelve port rectangular box. Both designs are equipped with 316L stainless steel fasteners for corrosion resistance. The split-shell design affords easy access for maintenance or access to stored cable loops.

Ultra-Miniature Junction Box (Series 140-074)

Glenair's smallest and lightest box and is designed for non-environmental module-to-chassis applications using MTC connectors. Cover snaps in place without the use of fasteners.

Mini Junction Box (Series 140-100)

Typically used in controlled (non-environmental) applications (such as instrument cases) or as a junction box for miniature connectors.

Small Junction Box (Series 140-101)

Designed for use in harsh environmental applications (shipboard weather deck, up-mast, etc.) which require EMI/RFI protection and resistance to vibration and shock.

Medium Junction Box (Series 140-102)

Used in high-performance military and commercial applications as a terminal block enclosure, interconnect junction box or instrument case. Size is suitable for larger shell size connectors and fittings.

Large Junction Box (Series 140-103)

This large volume box is geared for cable storage and for use in large electrical and optical interconnect junctions. Top and side surface area accommodate large numbers of circular and rectangular connectors and fittings.

Small Low-Profile Junction Box (Series 140-104)

Ideal for use in limited size and space applications, this composite box is geared for fiber optics and other miniaturized interconnect components. The box has been used extensively in high-performance air and space retrofit applications

Medium Low-Profile Junction Box (Series 140-105)

This low-profile box is geared for tight spaces, such as under-seat cockpit and in-flight-entertainment systems. The box features three (optional) internal dividers for increased isolation of radiated EMI.

Jumbo Junction Box (Series 140-107)

This extra large box is geared for terminal junctions as well as integration of large pieces of electronic and electrical equipment.

Step Two: Select Box Color, Plating and Plating Coverage

Color: Color pigments may be added directly to the polymer to create a limited range of standard color options. Currently Glenair offers the following box color selections:

- Black
- Blue
- Grey
- Brown (Natural)
- Purple

Certain industries and applications have standardized on particular colors and Glenair can provide custom colors as necessary. Colors may affect material performance. For exact matching of custom colors please provide the factory with a PMS color chip number or material sample.

Plating: Glenair offers three standard plating options for EMI/RFI applications:

- Electroless Nickel
- Ni-PTFE
- No Plating, Customer Choice of Base Color

Plating Coverage: Plating may be applied selectively to meet specific EMI/RFI shielding and grounding requirements (Unplated models are selected when the grounding of interconnect components for EMI protection is not required). Internal plating with selectively plated penetrations provides optimal EMI protection and surface durability (scratch resistance) External Plating provides complete electromagnetic compatibility without the cost of selective masking and plating.

Internal Plating Only

Selective Plating

PEI* Resin Withstands Long-Term Exposure to Heat, Moisture and Caustic Chemicals

Glenair CostSaver Composite Boxes are made from PEI, 30% glass fiber, (polyetherimide). PEI is an amorphous thermoplastic polyetherimide offering outstanding high heat resistance, high strength, modulus and broad chemical resistance. Its balance of properties and processability offers design engineers exceptional flexibility and freedom to innovate. PEI resins are inherently flame resistant with low smoke emission. It is radiation resistant, microwave transparent and is naturally flame retardant. Because of its unequaled properties, PEI is the ideal replacement for steel and other metals. PEI resins offer: inherent flame resistance, long-term heat resistance, dimensional stability, strength and modulus at elevated temperatures, hydrolytic and chemical stability, and environmental and corrosion resistance.

Environmental Properties

PEI resin is resistant to mineral acids, mineral salt solutions and dilute bases. Unlike other amorphous resins, PEI polyetherimide also demonstrates unusually good resistance to a wide range of caustic chemicals.

PEI resin is unaffected by most hydrocarbons, making it an excellent candidate for aircraft and shipboard applications exposed to gasoline, oils and other fuels.

PEI resin is inherently resistant to UV radiation without the addition of stabilizers. Exposure to 1000 hours of Xenon arc weatherometer irradiation (1.55 Watts/m² irradiance at 340 nm, 63°C) produces a negligible change in the tensile strength of the resin.

PEI resin exhibits excellent hydrolytic stability of tensile strength after immersion in water. 10,000 hour immersion tests in water at 212°F (100°C) show that PEI resin's physical properties remain virtually unchanged, even with repeated cycling from steam pressure to drying in vacuum at room temperature.

*G.E. ULTEM® Resin

Thermal Properties

An outstanding property of PEI resin is its ability to withstand long-term exposure to elevated temperatures. This high-heat performance, combined with excellent flammability ratings and UL recognition, qualifies PEI resin for demanding high temperature applications. UL rates PEI resin for continuous use at 170°C. The resin's high glass transition temperature, T_g, of 419°F (215°C), coupled with its high heat deflection temperature of 392°F (200°C) at 264 psi (1.82 N/mm²), contributes to its excellent retention of physical properties at elevated temperatures.

The coefficient of thermal expansion is an important design consideration in the production of large composite enclosures, fittings and mating connectors. The table below lists the coefficients of thermal expansion for PEI and the matching values for various metals:

Coefficient of Linear Thermal Expansion

Material	10 ⁻⁵ in/in -°F	10 ⁻⁵ m/m -°C
PEI	1.1	2.0
Brass	0.4 - 1.0	1.6-1.8
Zinc	1.5	2.7
Aluminum	1.2	2.2
Steel	0.7-0.8	1.2-1.5

Strength

At room temperature PEI resin exhibits strength far beyond that of most engineering thermoplastics, with a tensile strength yield of over 15,000 psi (100 N/mm²) and a flexural strength at 5% deflection of 21,000 psi (145 N/mm²). Even more impressive is the strength at elevated temperatures. At 375°F (190°C), a temperature well beyond the useful range of most other engineering thermoplastics, PEI retains approximately 6,000 psi (41 N/mm²) tensile strength. The inherent strength of PEI is increased by reinforcement with glass fibers, such as the 30% fiber mix used by Glenair.

Step Three: Select the (Optional) Grounding/Earthing Device

Choose from Two Standard Grounding Device Designs

MIL-STD-1310G (NAVY) requires that electrical equipment operated from an external power source be grounded to provide electrical safety and personnel shock protection. Glenair's integrated grounding foot (top photo) combines the earthing function into one of the box mounting feet; thus eliminating the need for an additional, external grounding strap and mounting point.

The simple grounding stud (bottom photo) is an inexpensive and yet effective way to provide overall grounding of the box. Typically, a wire grounding strap is fixed to the stud and taken to ground on an adjacent bulkhead. The threaded stud penetrates the box for easy attachment of an internal ground wire.

Glenair Composite Boxes, Connectors and Accessories Test Plan

Plating Adhesion Glenair# 9-44-18/TN94-159

The item is tested in accordance with MIL-DTL-38999 and should not exhibit any blistering, peeling or other separation of the units plating when immersed in ice water at 0°C within 15 seconds after 30 minutes exposure to 200°C in a circulating oven.

Vibration NTS# 973-7369-2

When mounted in a suitable fixture on a vibration table and subjected to vibration in accordance with MIL-STD-167 type 1 for box units & Mil STD-1344, Method 2005 Condition III, for fittings and accessories. The tested items should not exhibit loosening of component parts or evidence of damage.

Shock NTS# 973-7369-2

When mounted on an Impact plate the Glenair Box is subjected to shock load (Hammer drop) in accordance with MIL-STD-901D, Lightweight, Grade C, there shall be no loosening of parts or evidence of damage. A 400 LB hammer weight attached to a 5 foot long swing arm is raised and released to strike the mounting plate, 9 blows (3 blows in 3 axes).

Shock MOD# BR8470 Grade C & F

Glenair box is mounted on a suitable fixture and subjected to an initial 70G load progressing to 130G load in accordance with MOD BR 8470 Grade C & F, there shall be no loosening of parts or evidence of damage.

Salt Spray Glenair# 9-44-18/TN94-159

The item shall meet Braid Retention, Device conductivity, functional requirements and exhibit no exposure of underplate or base material when subjected to 2000 hrs per MIL-STD-1344 Method 1001.

Dust NTS# 973-7369-1

The item must conform to required torque limits and functional requirements within 25% after being subjected to sand and dust test of MIL-STD-202 Method 110.

UV Light Resistance GE RDM88050255-6042

There shall be no degradation of the mechanical properties defined in this specification after testing in accordance with ASTM D2565

Glenair's 140-060 Series Junction Box for the US Navy is available in four sizes and is supplied either with or without terminal rails and blocks. (See Page E-16)

Impact

There shall be no evidence of breaking or cracking of components or other damage, which could affect the product performance. The box will be tested in accordance with MIL-STD-1344 Method 2015 using 8 drops from a height of 2 meters with plate indexed at 36° intervals.

External Bending Moment Glenair# 9-44-18/TN94-159

No evidence of damage detrimental to normal operation when subjected to 3X magnification after being subjected to loads specified in MIL-STD-1344.

Temperature Cycling NTS# 575-9249

Item is subjected to a controlled temperature in accordance with MIL-Std-1344 Method 1003 @ -65°C to 200°C. After testing the product must not exhibit any cracking, peeling or separation of plating, or other functional damage.

Hydrolytic Stability NTS# 878-536

In accordance with ASTM D570-81, Tested Items shall be free of defects detrimental to mechanical performance, no increase in weight greater than 1% and no evidence of cracking, breaking or loosening of component parts when subjected to boiling water.

Ice Resistance Glenair# 9-44-18/TN94-159

The item must conform to required torque limits and functional requirements within 25% after being immersed for a minimum of 3 cycles in tap water for 1 minute and placed in an ambient temperature of -65°C for one hour (until surfaces are completely iced over).

Flammability

The item flame and after flow-extinguishing time shall not exceed limits defined in Table II of MIL-STD-1344 Method 1012, Smoke index, NES 711 issue 2, and NES 713 issue 3. Burning behavior by Oxygen index, ISO 4589.

Water Tightness EA# 0C13513-039514

Water tightness and internal pressurization tested at 1 atmosphere (14.7 psi). Unit is subjected to a progressive internal pressure test in three feet of water at ambient temperature in increasing increments of 1psig for 2-minute intervals.

Outgassing JPL 081892

Unit is tested in accordance with ASTM E 595; maximum allowable weight loss is 10%. After test and bake out the maximum allowable VCM (volatile condensable material) is 0.10%.

Electrical equipment ready for installation in Glenair's 147-020 Series Electrical Box for the U.S. Navy

Electromagnetic Shielding TRW/ABQ-55C-1186-0

Shielding effectiveness / transfer impedance tests performed in accordance with Military industry standards and customer specific requirements. Transfer impedance measurements from 1 through 100 MHZ and radiated emissions were evaluated in the ranges from 20 through 1000 MHZ. The test specimen is subjected to an EMI field and measured to determine to specific levels of shielding properties are exhibited.

Step Four: Select Internal Terminal Rail Mounting Plate and Drilling

Glenair manufactures an internal terminal rail mounting plate for all box sizes except the Ultra-Miniature (140-074) and Mini (140-100). Terminal rail mounting plates are fabricated from aluminum alloy or stainless steel and are typically passivated or plated with electroless nickel. Custom platings are also available. The factory maintains dimensional specifications for all popular din rail and terminal block types and can drill plates per these specifications or to your drawing. Please consult factory for mounting options for nonstandard electronic components.

The Standard Plate Selection for Each Box Comes with Threaded Inserts for Most Popular Terminal Rails or Blocks

Step Five: Select Box Input-Output Components: Feed-Through Fittings

Front, Rear and
Flange Mount
configurations

Optional end-
fittings include
Banding Adapter
Platforms, Shrink
Boots and
Strain-Reliefs

Designed for use with all types of shielded and unshielded cable and conduit, from less than 1/4" to 1 3/4" in diameter

Glenair manufactures a full spectrum line of feed-through fittings for routing wire, cable and conduit into and out of switch gear and other types of junction boxes. The fittings are also ideal for thru-panel and bulkhead applications.

From environmental sealers and EMI/RFI shield terminators to strain reliefs and shrink boot adapters—Glenair has the right box feed-through for every application requirement.

Stainless versions are available in every configuration, but as a design consideration, composite feedthroughs should be considered for all applications where weight savings and extended corrosion protection is desired. Our composite thermoplastic designs (component series 637-094) offer significant weight savings over stainless steel and, again, unlimited corrosion protection. Many of our most popular part numbers are in stock, in quantity and ready for immediate delivery.

It is particularly important not to specify aluminum alloy fittings for harsh environment box applications. Compared to aluminum alloy, Glenair composite fittings provide equal or improved RFI/EMI protection, and are made from the same high-grade ULTEM® engineering thermoplastic as our boxes. Composite feedthroughs are designed to meet RTCA/DO-160C environmental conditions and physical strength requirements. Please consult the factory for assistance in selecting the best materials and platings for your application.

Braid Retention Glenair# 9-44-18/TN94-159

Fitting terminations shall be capable of providing 2.5 milliohms maximum resistance between braid and fitting interface when braid is subjected to a tensile load of 5 Kg applied gradually.

EMI Shielding MOD# ME1A24S136F

Shielding effectiveness Shipboard in accordance with M.O.D. Def Standard 59-41 DRE01. The Glenair box is subjected to an EMI field and measured to the level of shielding effectiveness per the Def standard 59-41 DRE01.

Indirect Lightning (Lightning Strike) LT# LT-95-1153, LT-00-1752

Testing in accordance with MIL-STD-1344. Item is subjected to Waveform 1 & 5B using a high current generator. The item must remain functional without degradation of unit's electrical performance. Waveform 1 and 5B are applied starting at 3ka increasing to 20ka checking continuity measurements at set intervals. Waveform 1 will additionally be subjected to an oscillatory wave starting at 30ka and increasing in 10ka steps until failure in continuity measured.

Glenair 147-021 and 147-022 Series Sound Powered Telephone Boxes for the US Navy are available in three box sizes with custom single, dual or quad jack receptacles

Humidity NTS# 575-9249

The test specimen is subjected to the humidity test specified in MIL-STD-1344 Method 1002 Test Condition Type II. The tested item shall exhibit no weight increase, swelling or other evidence of moisture absorption into the base material.

Fungus Resistance TBM84-3

Materials used shall be certified as fungus inert in accordance with requirements of MIL-STD-810C, Items must have no evidence of Fungus growth, deterioration or corrosion as a result of testing.

Shock NTS# 373-2685, Supplement 1

When mounted on an uneven surface with one mounting location lower to create torsion loading, box is subjected to shock per MIL-S-901D Class 1, Grade A, Type C (lightweight).

Glenair 147-015 Series Indicator Light Box is available in four sizes and supplied with US Navy specified indicator lights and switches

Magnetic Permeability Glenair# 9-44-18/TN94-159

Items shall be tested in accordance with MIL-STD-1344.

Ozone NTS# 678-3143

There shall be no evidence of cracking or other damage when item is tested in accordance with MIL-STD-1344 Method 1007.

Fluid Immersion NTS# 678-3143

Item shall meet the functional requirements in accordance with MIL-STD-1344 Method 1016 (one sample per fluid).

Halogen Free GE 050198

Testing for halogen releases when ignited in accordance with ASTM E 595, Method XX,

Radiation Test GE RDM88050255-6042

Gamma Ray, Electron Beam, X-Ray, Ultra Violet, Visible, Infrared, Microwave and Radio Frequency testing performed.

Fitting to Box Conductivity NTS# 575-9249

Max. Voltage drop of 3 millivolts before conditioning and 6 millivolts after conditioning when tested to MIL-STD-1344 Method 3007.

Step Six: Select Box Input-Output Components: *Environmental Connectors*

Glenair offers a wide range of circular and rectangular connectors, including MIL-DTL-28840, MIL-PRF-83513 and MIL-DTL-38999 Hermetics. Environmental connectors of this type, and the ones highlighted below, are ideally suited for use as input-output devices in box applications.

Glenair's Series 22 Geo-Marine® Connectors offer high-density insert arrangements for a variety of oceanographic, geophysical and other severe environmental applications. The mated stainless steel plug and receptacle have a hydro-

static pressure sealing capability of up to 5000 psi (345 bar) and are available in either glass-seal hermetic or rigid dielectric environmental insulators.

Glenair's Composite MIL-DTL-38999 Series III Style Fiber Optic Connector is built to insure precise optical alignment. Composite materials make this one of the lightest weight, high-reliability connectors on the market. Connector polarization keys and keyways are molded to tighter tolerances than required by the MIL-DTL-38999 specification to reduce radial misalignment and insertion loss.

Glenair developed the **Series 800 "Mighty Mouse"** to fill the need for a miniaturized circular connector with performance comparable to other high-reliability aerospace connectors. The connector is intended for applications such as missile systems, satellites, man-portable battlefield gear, and light armored vehicles. It is ideally suited for use with Glenair's smaller junction boxes.

Step Seven: Select Wire and Cable Construction—From Convoluted Tubing to Armored and Overmolded Cable Designs

The Widest Range of Protective Materials in the Industry are Available From Glenair

Depending on your selection of input-output devices—from simple wire feed-through fittings to environmental connectors—Glenair can outfit the junction box assembly with an appropriate cable or conduit design. Tested and qualified products, including a broad range of environmental jacketing and shrink-boot materials are available for standard cable-to-connector designs. Glenair can also supply overmolded cables for harsh environments made from polymer compounds such as Viton®, Neoprene and Polyurethane.

Given the need to complete final installation of the box interconnect system on-site, many customers specify plastic and metal-core convoluted tubing as their preferred media protection material. Flexible, high-temperature convoluted tubing is an ideal material choice for interconnect systems designed around the Glenair junction box. The material provides a durable, highly-flexible enclosure for all types of wires. And Glenair is able to supply the all the end-fittings and transitions necessary to meet any installation configuration. Available materials include ETFE, FEP, PFA, PTFE and halogen-free, light weight PEEK. Glenair conduit, systems and fittings are approved to the US Navy's MIL-PRF-24758 standard. Our new FIRST Conduit Fitting System features a unique swivel design for easy installation.

Relevant Industry Standards:

IEC IP Ingress Ratings

The IP Rating indicates the measure of an enclosure's protection against dirt and water. Glenair CostSaver Composite EMI/RFI Boxes are rated to IP 67, where 6 = Total Protection Against Solid Objects, and 7 = Protection against the effects of temporary immersion in water. Glenair's Mini 147-100 Box is rated to IP64 which indicates total protection against dust, and from water sprayed from all directions.

SP-R-0022A and ASTM-E-595 Vacuum Stability

Both specifications govern the "outgassing" of non-metallic materials for use in spacecraft. Tests measure Total Mass Loss which may not exceed 1.0% of the total specimen mass. Tests for this standard also measure Collected Volatile Condensable Materials from Outgassing in a Vacuum Environment; which means they measure odor and toxicity emitted from the material. All Glenair CostSaver Composite EMI/RFI Boxes are tested and approved to these standards.

IEC 79-7 MOD (ISA-S12.16.01) Hazardous Area Explosion Protection

Electrical enclosures are certified for use in hazardous areas such as oil-rigs and tankers by standards organizations such as CENELEC. Tests measure the ability of an electrical apparatus to prevent the emission of sparks, arcs or hot surface temperatures from igniting a fire in a hazardous area. Glenair Composite EMI/RFI Boxes meet E EX e IIB T3 (increased safety) in Class I, Zones 1 and 2 hazardous locations.

UL 94: Flammability of Plastic Materials

This requirement covers flammability of plastic materials used in devices and appliances. The flammability properties of materials are measured in response to heat and flame under controlled laboratory conditions. All Glenair CostSaver Composite EMI/RFI boxes are tested and approved to this standard.

Bombardier Toxicity and Federal Railroad Administration Flame Spread, Smoke Density and Toxicity

This requirement covers material flammability and toxicity IAW with both aircraft and rail transportation requirements. Testing was completed on actual molded box samples, in the medium gray color, made from Ultem 2300-GY4001. Testing consisted of flammability IAW ASTM E 162, rate of smoke generation IAW ASTM E 662 and Bombardier SMP 800-C toxic gas generation. The Glenair composite box samples passed all tests. For additional information please request test report No. 08-002-923(B) for Bombardier toxicity, and test report No. 08-002-923(A) for surface flammability and rate of smoke generation.

Corrosion resistance and weight reduction are just part of the story for these Glenair junction box application examples

Future Soldier:

Weight reduction was the principal goal in selecting the Glenair composite box for the JEDI Warrior Program. The boxes house Lithium battery packs used to power video image and battlefield data collection systems carried by the soldier. The interconnect system and its power supply must be able to withstand the rigors of exposure to mud, dust and abusive handling. The complete solution from Glenair also included our Series 800 "Mighty Mouse" Connector and overmolded cable sets.

Ministry of Defense:

Glenair composite boxes for the UK Ministry of Defense were subjected to a rigorous testing program, including high-duration shock, EMI and salt-spray corrosion resistance. The MOD has chosen the Glenair boxes as standard replacements for existing aluminium junction boxes which became too expensive to maintain due to high-impact breakage and corrosion. The Glenair boxes now serve in submarines, missile-frigates and other shipboard applications.

Step Eight: Select Additional Penetrations for Hole-Cap Assemblies

Junction boxes may be equipped with additional penetrations for future expansion needs, or for applications where one box design will be used in several different configurations. Glenair supplies a hole-cap assembly to seal unused penetrations against the environment. The hole-cap assemblies are rated to IP67 for particle and moisture protection.

Glenair can produce virtually any design of custom cap or lid required. Please consult the factory.

Missile-Control:

The ability to withstand extremes in shock and vibration, as well as long term corrosion protection and electromagnetic compatibility were baseline requirements for this missile control junction box. The complete system includes fiber optic connectors, termini and cabling. Interconnect systems of this type must be able to sit idle for many years, and then perform flawlessly in the blink of an eye.

Fiber-Optic Storage:

In this application, Glenair was able to provide a complete, turnkey interconnect assembly which included both the lightweight composite box, as well as the conduit and the fiber optic interconnects. The box doubles as an environmentally controlled storage area for additional lengths of fiber-optic cable. In the event a termination is damaged, both the conduit and box may be opened to access the termini and the wire-loops for easy repair.

Every Picture
Tells a Story

This One
Speaks Volumes

Glenair is in the business of solving even the most complex interconnect design problems. We know that your problem isn't solved when the connector and cable are selected. The real work starts with the packaging of the key components for actual use. Glenair is ready with junction box solutions that incorporate our complete line of interconnect products—all available in corrosion-free composite thermoplastic. At Glenair, we're ready with both the individual interconnect technologies, as well as the most innovative and effective packaging solutions available today. Now *that's* a story worth telling.

Transfer Impedance

Radiated Emissions

Indirect Lightning Strike Threshold
SAE - AE4L-87-3, Wave Forms 1 & 5B

The values shown for indirect lightning strike represent the approximate threshold of conductive composite tubular attachment components having diameters equal to those listed. For example, connector shell size is calculated in .0625 increments; shell size 10 = 10 x .0625 or .625 diameter. Cable entry diameter is another consideration. Use the smallest part diameter when evaluating thresholds. Consult factory for additional information.

Box Specification Worksheet

Glenair brings a unique strength to junction box systems: the ability to build a turnkey assembly—wired, terminated, tested and complete with all the necessary fittings and accessories. We are the only nonmetallic enclosure manufacturer in the world which can supply an integrated interconnect system of this type. And we are pleased to provide this service at small quantity and prototype levels. This worksheet summarizes the major decision points in the design and development of an interconnect box assembly.

Select/Indicate Connector and Fitting Locations:

Indicate the locations of your selected connectors and fittings. You may simply describe the devices in the space provided ("Two jam-nut 15 pin D38999 Series III Connectors go on Side "A") or you may sketch the fittings and connectors in place with appropriate labels. There are no limits to the size and number of penetrations other than the physical boundaries of the box surfaces. Use the dimensional information published with each connector or feed-through series, or call our factory for assistance.

NOTE: Box Series Numbers are for reference only. Call the factory for part number assignment for custom box configurations.

Rectangular Box Top Template

Input-Output Device Position Template

This template may be used to indicate initial positioning of connectors, feed-throughs and fittings such as ground lugs. Indicate the location of all special markings or labels including correct wording/numbering.

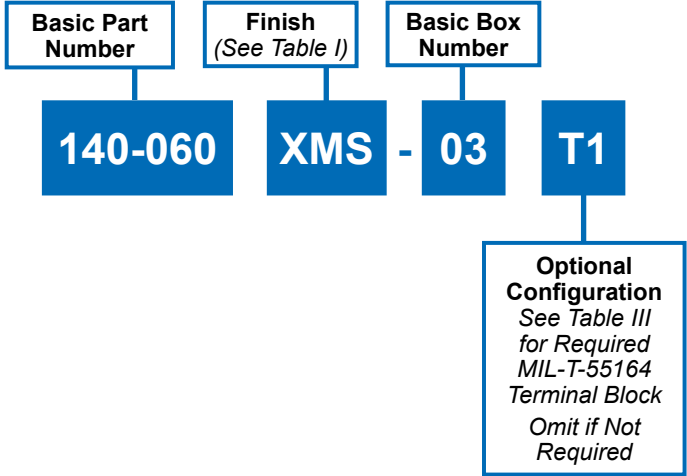

Three-Legged Junction Boxes

Rectangular Junction Boxes

The structural ribs located on the rectangular box sides are provided to increase the overall strength of the box. The ribs may be removed to accommodate additional fittings if necessary. For additional assistance in locating connectors and fittings please consult the factory. For custom fittings, such as specially designed doors or lid covers, please consult the factory. Application engineering for customer specified box assemblies is provided free upon request.

A New Way to Make Ends Meet

Glenair G-Load Coupling

For most applications, our standard self-locking coupling nuts with their familiar clicking action are a sure bet. But for situations where a helping hand is required to ensure the backshell coupling nut is tightened securely against connector interlocking teeth, Glenair is proud to offer our patented G-Load Coupler.

G-Load Coupling uses concentrically formed spring arms to push the backshell against the connector—aligning and seating the teeth and eliminating part loosening problems. The secret is in the G-Load patented low-torque performance: The G-Load Coupler actually

becomes tighter as the coupling reaches its final, full-thread engagement. And the G-Load Coupler remains tight even at low torque levels—eliminating vibration-related decoupling problems. Best of all, the G-Load Coupler can be installed again and again to full torque without degrading performance. Naturally, the entire mechanism is made from composite materials to eliminate maintenance and reduce weight.

So, for that little extra peace of mind that comes from couplers that won't rattle loose, call the factory and enquire about the new G-Load Coupler from Glenair.

Glenair Environmental Class MIL-DTL-38999 Type Connectors in Composite Thermoplastic are Built for a Broad Range of Harsh-Environment Applications

Product Applications

Glenair is recognized as trusted supplier of harsh environment electrical connectors built to the MIL-DTL-38999 standard. This section of the catalog presents a selection of the environmental class MIL-DTL-38999 Series III type solutions produced by Glenair in composite thermoplastic.

Available Insert Arrangements

Based on industry-standard specifications, Glenair's MIL-DTL-38999 derivative environmental class connectors are supplied with insert arrangements IAW MIL-STD-1560, or appropriate sub-sets depending on connector series. Consult factory for available insert arrangements.

TABLE I: MATERIALS

Shell, Barrel, and Coupling Nut	30% glass filled Ultem® Composite Thermoplastic
Front and Rear Insulators	Glass-filled LCP in accordance with MIL-M-24519, Type GLP-30F
Contact Retention Clip	Beryllium copper, heat-treated, unplated
Grommet, Peripheral Seal and Interfacial Seal	Blended elastomer, 30% silicone per ZZ-R-765, 70% fluorosilicone per MIL-R-25988
Pin / Socket Contacts (Environmental)	Copper Alloy / Gold Plate - per M39029 / AS39029
Adhesives	Silicone and epoxy
Potting Compound: PCB and Solder Cup	High-strength epoxy, Hysol EE4215.

TABLE II: POPULAR ENVIRONMENTAL CLASS CONNECTOR FINISHES

Plating Code	Material	Finish	Specification
XM	Composite	Electroless Nickel	AMS-C-26074
XMT	Composite	Ni-PTFE <i>1000 Hour Grey™</i> (Nickel Fluorocarbon Polymer)	MIL-DTL-38999L (2000 Hour Salt Spray)
XW	Composite	Cadmium Olive Drab over Electroless Nickel	AMS-QQ-P-416, over AMS-C-26074 (1000 Hour Salt Spray)

Consult factory for available insert arrangements.

Crimp Contact Termination Instructions

How To Terminate, Install and Remove Crimp Contacts

1 Set Up Series M22520 Crimp Tool. See pin and socket contact selection guide for correct tools based on contact part numbers and tool codes. Install proper positioner into crimp tool. The label on the positioner shows the proper tool setting for each wire size. Turn the adjustment wheel to the correct setting.

For Wire Sizes 22, 22M, 22D

1/8" - 5/32"
(3.2 - 3.9)

2

For Wire Sizes 10, 12, 16, 20

7/32" - 1/4"
(5.6 - 6.4)

2 Strip Wire. Remove wire insulation, taking care to avoid nicking or cutting wire strands. Strip wire to length shown. Holding wire by insulation, twist strands together to form a neat bundle.

3 Insert wire into contact. The wire should be visible in the inspection hole.

3

4 Insert wire and contact into crimp tool as shown. Make sure that the contact is fully inserted into the tool. Squeeze handle completely. The ratchet mechanism will not allow a partial crimp. Release handle and remove contact.

4

5 Inspect crimped contact. Wire should be fully inserted and the crimp should be uniform in appearance.

5

6 Install contact into connector. Slide colored end of insertion/extraction tool over wire insulation and slide the tool forward until it bottoms against the contact shoulder. Insert tool/contact/wire into contact cavity, being careful to avoid damage by properly aligning the contact with the cavity. Push forward until contact retention clip snaps into position. Remove tool. Gently pull on wire to confirm contact retention. Fill unused contact cavities with uncrimped contacts followed by the proper MS27488 sealing plug. For potted cable applications, install crimped-wire contacts in all unused cavities and terminate tail-end to a SAE-AS25274 cap.

Contact Size	Wire Diameters (Inches)*	
	Min	Max
10	0.135	0.016
12	0.097	0.142
16	0.065	0.109
20	0.040	0.077
22	0.034	0.060
22M, 22D	0.030	0.060

CONTACT RETAINER CLIP

*The min diameters are to ensure proper sealing. The max diameters are to allow the use of removal tools.

Contact Size	Seal Plug	Cap
10	AS84049/81-10	AS25474-4
12	MS27488-12	AS25474-4
16	MS27488-16	AS25474-3
20	MS27488-20	AS25474-2
22, 22M, 22D	MS27488-22	N/A

6

7 Contact Extraction. Use the white end of appropriate insertion/extraction tool. First, push the wire into the groove of the extraction tool's tip. Slide the tip of the tool over the jacketed wire into the connector cavity. Push the tool until the tip bottoms in the connector. A straight push is best. Avoid wiggling or rocking the tip, as this may damage the cavity. Pinch the wire between your thumb and the white plastic grip and slide the tool and contact out of the connector.

7

Crimp Tool And Positioner For #12 and #16 Power Contacts

1 Crimp tool for use with size #16 and #12 power pins. 9.75 inches OAL, 1.25 pounds. Use with M39029/57 and /58 contacts and 809-093 adapters.

2 Positioner for use with size #12 and #16 Power contacts.

Figure	Military Part Number	Daniels Part Number	Tool Code

2	M22520/1-04	TH163	B

Miniature Adjustable Crimp Tool for #12, #16, #20, #22D Signal Contacts

These crimp tools perform precision eight indent crimps for gas-tight wire terminations and excellent tensile strength. Adjustment wheel has 8 settings. Ratchet mechanism prevents improper crimps. Use with bayonet-type positioners. Check calibration with M22520/3 gages. Length is 6.75 inches, weight is approx. 10 oz.

1 Standard M22520/2-01 miniature crimper. Use with standard size #20 and #22D contacts and with M39029/76, /77 and /78 coaxial center contacts. Requires positioner, ordered separately.

Glenair Part Number	Military Part Number	Daniels Part Number	Tool Code
809-015	M22520/2-01	AFM8	C

2 Positioner for M39029/76, 77 and 78 coaxial inner contact. Use with 809-015 crimp tool.

Parallel Action Crimp Tool and Hex Die Set

1 Parallel action tool for use with hex crimp dies. 11 inches OAL, 2.0 pounds. Anodized aluminum frame, steel mechanism, plastic handles. Includes tool for die set removal. Accepts all M22520/5 die sets.

2 Die set for terminating coaxial shield to outer contact. Use with size #12 matched impedance M39029/102 and 103 type coaxial contacts. Set consists of upper and lower halves. Made of hardened steel with black oxide finish. Approximately 2 inches in length, assembled. Die set has two closures per illustration.

Crimp Tool And Positioner For #12 Coaxial Outer Contact

For crimping size #12 shield sleeves. These mil spec approved tools feature a ratchet mechanism to prevent damage from overcrimping. Check calibration with M22520/3 gage.

1 Crimp tool for use with size #12 coaxial contacts. Black handles. 9.75 inches OAL, 1.25 pounds.

2 Positioner for use with size #12 coaxial contacts. Use with 809-133 (M22520/31-01) crimp tool.

Consult factory for available insert arrangements.

APPLICATION NOTES

- Material/ Finishes:
Shells, Jam Nut - See Table II
(Composite Jam Nut No Plating Required).
Insulators- High Grade Rigid Dielectric/ N.A
Seals- Fluorosilicone/ N.A.
- Assembly to be identified with Glenair's name, part number and date code space permitting.
- Modified major diameter 1.252-1.257 (31.80-31.95).
- Insert arrangement in accordance with MIL-STD-1560.
- Insert arrangement shown is for reference only.
- Blue Color Band indicates rear release retention system.
- 16# AWG contact arrangements only. See available arrangements opposite page.
- Metric dimensions (mm) are in parentheses.

High Voltage Electrical Power Distribution

From 0 to 60 in 3.9 Seconds

High voltage electrical power distribution is a critical component of the 100% electric Tesla Roadster.

The reliable distribution of electrical energy from the car's lithium-ion energy storage system to the vehicle's motor, electronic control module, HVAC system, transmission and regenerative braking unit depends on a high-performance wiring system made up of high-temperature

shielded conduit and ruggedized reverse-bayonet power connectors—all made by Glenair.

Glenair is on the forefront of innovative efforts to advance the reliability and performance of electric vehicles. Glenair power connectors, cables and conduit are deployed in high-voltage power management and distribution applications for systems as demanding as military vehicles—and as fast as the Tesla Roadster.

One Stop Shopping for All Your Backshell, Connector and Cable Assembly Requirements

Shield termination banding tools and connector-to-backshell assembly tools are just part of the story

Glenair addresses interconnect system assembly requirements with a variety of military standard and specialized connector-to-backshell assembly tools, braided shielding banding tools and accessories. Our tool line for composite components includes connector wrenches, as well as universal connector holding tools for production use as well as field maintenance.

Glenair's connector and backshell holding tools and wrenches ensure fast and reliable

Glenair's Band-It® Termination System for braided metal and composite shielding includes both hand-held and bench-mounted units. The Band-It® Termination System provides fast and reliable shield terminations which pass the most stringent shock, vibration and thermal tests. The low-profile and smooth inside diameter of the one-piece austenitic stainless steel clamping band virtually eliminates RFI/EMI leakage paths.

assembly of interconnect components to correct torque levels—a critical issue with all types of coupling systems. Special designs fit the unique knurling on composite connectors and backshells.

For more information on the complete range of tools supplied by Glenair, please see our *Interconnect Cable Assembly Tools* catalog, visit our website or consult the factory

Glenair Assembly Tools Help Prevent Distortion and False Tightening Problems

Composite backshell tightening tools are available and provide virtually a full 360° gripping surface on backshell coupling nuts. These innovative tools minimize the possibility of coupling nut distortion and false tightening problems often caused by soft-jaw pliers or strap wrenches.

Reliable Installation of Glenair Backshells on Circular Connectors

When used with the appropriate connector holders and torque wrenches, Glenair Backshell Assembly Tools provide the user with consistent, repeatable backshell installations. Designed primarily for production assembly use, the tools can also be used equally well for successful field maintenance operations.

Glenair Backshell Assembly Tools may also be utilized effectively with backshell rotatable couplers produced by other manufacturers, providing the "B" reference diameters are consistent with those shown within this catalog.

Recommended Tightening Procedures

Recommended tightening procedures, tools and torque values offered by Glenair are intended as an aid to properly fasten the backshell to the connector interface threads.

Glenair offers a variety of tools to accomplish proper tightening; our 600-091 Hex Wrench is configured to make provide support to each

specific coupling nut to be tightened, our TG70 strap wrench is intended for general use on cable clamps. Hand-held and bench-mount torque wrenches accommodate our 600-005 plug or receptacle connector holders (see *Backshell Assembly Tool* catalog).

When tightening backshell onto connectors, it is important to follow Glenair's recommended procedures for each tool being used.

When tightening backshells with rotatable coupling nuts, Glenair recommends the backshell to be hand tightened to engage the connectors interlocking teeth or spline features, making sure the teeth are fully engaged before fully torquing with our tools. We also suggest retorquing by removing the tool and reinstalling the tool approximately 90° away from the initial position and tightening to the connector manufacturer's recommended value.

Composite backshells should be tightened to 80% of the values shown for AS85049 light and medium duty torque. Secondary components such as: Glenair's cable clamps, gland sealing nuts, sleeves or adapters, not directly fastened to the connector should be tightened 40 to 60 inch pounds to insure proper performance.

Four Easy Steps for Proper Backshell Assembly

1. Select plug or receptacle holder (most holder series provide "universal polarization", but a few connector series require specific polarization for each alternate keying arrangement).
2. Set desired torque on torque wrench.
3. Mount holder on square drive of torque wrench. Carefully mate with connector, and hand-tighten Glenair backshell coupling. To assure proper mating, anti-rotation teeth must be fully engaged.
4. Tighten rotatable coupler with assembly tool. Do not use excessive grip on handles. When coupler begins to tighten, relax grip and rotate assembly tool back 90°, then resume grip and continue to tighten; repeating this sequence until desired torque level is reached.

CAUTION: Do not apply torque in excess of signal setting. Excess torque will cause signal pointer to reset and give erroneous readings.

Setting Torque Levels

To verify proper backshell installation values, electrical signals are built into bench-mounted (audio) and hand-held (light) torque wrenches. The procedure for setting torque levels is the same for both units.

Setting Desired Torque for Right-Hand Thread Tightening

To set torque, turn Bezel (1) clockwise until signal is on. Continue to turn Bezel until Main Pointer (2) is at desired torque level on scale. You may cover the audio signal during this procedure to minimize noise level when setting the bench-mounted unit.

The Memory Pointer (3) is set by the above procedure. With this accomplished, turn Bezel counter-clockwise until the Main Pointer is aligned with zero on the scale. Your torque wrench is not ready for operation.

Resetting the Memory Pointer

When you wish to change torque levels, rotate the Bezel counter-clockwise until the signal is on. Continue to rotate Bezel until Memory Pointer is aligned with zero on the scale. now repeat the above procedure for setting torque.

Setting Desired Torque for Left-Handed Thread Tightening

Simply reverse the above procedure for setting the desired torque for left-hand thread tightening.

Stop Toolin' Around

Finding the right tool for the job just got a little bit easier

Nobody can grasp the ins-and-outs of interconnect tool design and manufacturing without a full understanding of cable harness assembly.

At Glenair, we not only manufacture the connectors, backshells, cables and enclosures which go into interconnect cable harnesses, we run a top-flight cable assembly service of our own. And we've drawn on this extensive experience to design and build

a complete family of specialized backshell assembly tools for most Mil-Standard circular connectors, as well as connector wrenches, mini-strap wrenches, universal connector holding tools and braid termination tools for production use and field maintenance.

Glenair is also now offering a broad range of fiber optic termination tools, including complete kits for both our Mil-T-29504 and front-release COTS termini.

APPLICATION NOTES

- Use in conjunction with Glenair 600-161 torque wrench and 600-162B or 600-162BV bench mounts (see page 14).
- Adjust set screw per tool setting procedure GAP134 (available on Glenair.com). Once adjusted must fit Glenair hex composite coupling nuts
- Customer is responsible for maintaining adjustment to compensate for wear.
- Replace tool if excessive wear is observed
- Gap is permissible during tool use for coupling nut assembly
- If set screw becomes loose causing loss of adjustment reapply suitable thread locking compound
- Wrenches are made of aluminum alloy with vinyl grips.
- Using other manufacturer's hex wrench pliers or soft jaw coated pliers will result in premature fracturing or damage to the composite product

22/23	75	80	120*	140
24/25	75	80	120*	140
28			135*	150
32			150*	150
36			150*	150

* TG70 Not Recommended For Values of 120 Inch Lbs. or Greater.

VARIANCE CHART NOTES

- Recommended installation torque is approximately 80% of MIL-C-85049 accessory thread strength values.
- Heavy duty installation torque values may be difficult to attain with the TG70 Strap Wrench; the values shown in brackets [] are the maximum attainable with the TG70 Strap Wrench using a single wrap.
- Glenair recommends using 600 series torque tools whenever possible. When torque loading exceeds 75 inch pounds, or to attain the heavy duty torque values shown, a double wrap strap provides suitable friction to achieve torque values.
- Glenair recommends that heavy duty torque values be directly read through the connector shell body with the use of 600-005 connectors holding tools.

600G161 Digital Torque Wrench and 600-162B Bench Stand

DIGITAL TORQUE WRENCH AND BENCH STAND

Torque Wrench 600G161

Digital Readout For Improved Accuracy

The Glenair dual drive digital torque wrench (600G161-D) features a dual sided drive head for hand or bench mount use. Features rotatable digital readout display. Available torque units include: Ft-lb, In-lb and Nm. Peak and track modes allow for data collection capability via supplied software and USB adapter. Provides quality departments the ability to track and record individual torque values.

600-161-D data/charger kit. Upgrades 600G161 for data collection and battery recharging.

1. Use in conjunction with Glenair connector and backshell tools
2. Torque range: 25-250 in/lbs; digital graduations 1/10 in/lb;
3. Accuracy: $\pm 1\%$ of indicated value
4. replacement battery: AAA x 4
5. USB cable, datatracking software, AC adapter, and 3/8" to 1/4" drive adapter included. Standard AAA alkaline batteries included with 600G161. Rechargeable NiMH AAA batteries and data/charger kit included with 600G161-D

600-162B DIGITAL TORQUE WRENCH BENCH STAND

1. Use in conjunction with Glenair 600G161 or 600G161-D digital torque wrench, sold separately
2. Material: steel, powder coat
3. Weight: 3 lbs
4. Supplied with mounting hardware
5. Tools required: T15 Torx® bit, 3/32" hex key

600-162BV DIGITAL TORQUE WRENCH VERTICAL BENCH STAND

1. Use in conjunction with Glenair 600G161 or 600G161-D digital torque wrench, sold separately
2. Material: steel, powder coat
3. Weight: 3 lbs
4. Supplied with mounting hardware
5. Tools required: T15 Torx® bit, 3/32" hex key

600-164

Large Broad Blade Utility Shear
for Cutting Metal-Clad Composite Braided Shielding
Also Cuts Rubber, Cable Jacketing, Cable, Plastics and Rope

600 - 164

Product
SeriesBasic
Number

- Nickel Chrome Plating Resists Corrosion and Rusting
- Broad, Short Jaws Provide Powerful Cutting Action
- Extended Handle Provides Comfort and Cutting Leverage
- High Leverage Provides Powerful Cutting Action for Light Metals, Rubber and Heavy Fabrics
- Cuts Rubber, Cables, Light Metal, Wire Metal Screens and Braided EMI/EMP Shielding, Cordage, Plastics and Rope
- Weight: 0.55 Pounds
- Shear Cut Length: 2.000 (51.0)

Recommended EMI Braid Cutting Procedure

Note: When cutting braid, both metal and especially composite, open cutter blades to allow the full 2" cut. Place braid all the way back onto blades as shown.

APPLICATION NOTES

1. Metric dimensions (mm) are indicated in parentheses.
2. Always wear approved eye protection.
3. Never use on or near live electrical circuits.

Shield Termination Assembly Process

1. Prepare Cable Braid for termination process (Figure 1).
2. Push Braid forward over Adapter Retention Lip to the Adapter Incline Point (or .4" [10.2mm] minimum braid length). Milk Braid as required to remove slack and insure a snug fit around the shield termination area (Figure 2).
3. Prepare the Band in the following manner:
IMPORTANT: Due to Connector/Adapter circumference, it may be necessary to prepare the Band around the Cable or Retention Area.

- A. Roll Band through the Buckle Slot twice. (Bands must be double-coiled.)
- B. Pull on Band until Mark (▷) is within approximately .250 inch (6.4mm) of Buckle Slot (Figure 3). The Band may be tightened further if desired.

NOTE: Prepared Band should have (▷) Mark visible approximately where shown in Figure 3.

Shield Termination

Clamping Process (Figures 4 thru 8)

NOTE: To free Tool Handles, move Holding Clips to center of Tool.

4. Squeeze Gripper Release Lever and insert Band into the front end opening of the Tool. (NOTE: Circular portion of looped band must always face downward.)
5. Aligning the Band and Tool with the Shield Termination Area, squeeze Black Pull-Up Handle repeatedly using short strokes until it locks against Tool Body. (This indicates the Band is compressed to the Tool Precalibrated Tension.)
NOTE: If alignment of band and shield is unsatisfactory, tension on band can be relaxed by pushing on slotted release lever on top of tool. Make adjustments as necessary and again squeeze black pull-up handle.
6. Complete the Clamping Process by squeezing the Gray Cut-Off Handle.
7. Remove excess band from tool and dispose.
8. Inspect Shield Termination.

IMPORTANT: Always roll band through the buckle slot twice (see Step 3). Bands must be double-coiled to function correctly. The failure to roll the band through the buckle slot twice is the most common user error in band style terminations.

Hand Banding Tool 600-058

The **600-058 Hand Banding Tool** weighs 1.18 lbs., and is designed for standard clamping bands 600-052 and 600-090 (see page 36) in a tension range from 100 to 180 lbs. Calibrate at 150 lbs. \pm 5 lbs. for most shield terminations. Tool and band should never be lubricated.

Reference: **BAND-IT**[®] part number A40199.

Hand Micro Banding Tool 600-061

The **600-061 Hand Micro Banding Tool** weighs 1.18 lbs., and is designed for micro clamping bands 600-057 and 600-083 (see page 36) in a tension range from 50 to 85 lbs. Calibrate at 80lbs +2 lbs. -7 lbs. for most shield terminations. Tool and band should never be lubricated.

Reference: **BAND-IT**[®] part number A30199.

Metric Dimensions (mm) are indicated in parentheses.

Standard Band 600-052 and Precoiled Standard Band 600-052-1

The 600-052 Standard Band is precision constructed of 300 Series SST/Passivate and designed for use with the 600-058 Hand Banding Tool or the 600-067 Pneumatic Banding Tool. Double-wrapped bands will accommodate diameters up to approximately 1.8 inches (45.7). Bands may be ordered flat (600-052) or precoiled (600-052-1). Bands come bagged and tagged in quantities from 1 to 100.

Reference: **BAND-IT®** part number A10086

Extended-Length Standard Band 600-090 & Precoiled Extended-Length Standard Band 600-090-1

The 600-090 Extended Length Standard Band is precision constructed of 300 Series SST/Passivate, and designed for use with the 600-058 Hand Banding Tool or the 600-067 Pneumatic Banding Tool. Double-wrapped bands will accommodate diameters up to approximately 2.5 inches (63.5). Bands may be ordered flat (600-090), or precoiled (600-090-1). Bands come bagged and tagged in quantities from 1 to 100.

Reference: **BAND-IT®** part number A11086

Micro-Band 600-057 Precoiled Micro-Band 600-057-1

The 600-057 Micro Band is precision constructed of 300 Series SST/Passivate, and designed for use with the 600-061 Hand Banding Tool or the 600-068 Pneumatic Banding Tool. Double-wrapped bands will accommodate diameters up to approximately .88 inches (22.4). Bands may be ordered flat (600-057), or precoiled (600-057-1). Bands come bagged and tagged in quantities from 1 to 100.

Reference: **BAND-IT®** part number A31186

Extended Length Micro-Band 600-083 Precoiled Micro-Band 600-083-1

The 600-083 Extended Length Micro-Band is precision constructed of 300 Series SST/Passivate, and designed for use with the 600-061 Hand Banding Tool or the 600-068 Pneumatic Banding Tool. Double-wrapped bands will accommodate diameters up to approximately 1.88 inches (47.8). Bands may be ordered flat (600-083), or precoiled (600-083-1). Bands come bagged and tagged in quantities from 1 to 100.

Reference: **BAND-IT®** part number A31086.

Metric dimensions (mm) are indicated in parentheses. Consult factory for diameters above 2.5 inches (63.5).

600-082 Cutter Knife

The 600-082 Cutter Knife replaces the cutter knife on the 600-061 Hand Banding Tool, and the 600-068 Pneumatic Banding Tool. Material is heat treated steel finished with black oxide and rust preventative.

Reference: **BAND-IT®** part number **A48087**

600-060-1 Micro Cut-Off Blade Kit

The 600-060-1 Micro Cut-Off Blade Kit for Serial Numbers up to 20999 consists of the blade, two E-rings and one pin, providing all parts needed to replace the cut-off blade on the 600-061 Hand Micro Banding Tool and the 600-068 Pneumatic Micro Banding Tool. Material is heat treated steel finished with black oxide and rust preventative.

Reference: **BAND-IT®** part number **A43999**.

600-060-2 Ref. BAND-IT® P/N A47899 for Serial Numbers **21000** and above.

600-056 Cut-Off Blade Kit

The 600-056 Cut-Off Blade Kit consists of the blade, two E-rings and one pin, providing all parts needed to replace the cut-off blade on the 600-058 Hand Banding Tool and the 600-067 Pneumatic Banding Tool. Material is heat treated steel finished with black oxide and rust preventative.

Reference: **BAND-IT®** part number **A40699**.

600-062 Cutter Knife

The 600-062 Cutter Knife for Serial Numbers up to 16589 replaces the cutter knife on the 600-058 Hand Banding Tool and the 600-067 Pneumatic Banding Tool. Material is heat treated steel finished with black oxide and rust preventative.

Reference: **BAND-IT®** part number **A40788**.

600-062-1 for Serial Numbers **16590** and above.

Reference: **BAND-IT®** part number **A67787**.

Metric Dimensions (mm) are indicated in parentheses.

**600-055 Calibration Key
and 600-072-1 Standard and 600-086-1 Micro
Banding Tool Tension Gauges**

600-055 Calibration Key

The 600-055 Calibration Key is designed for use with the 600-061 and 600-058 Hand Banding Tools. Material is black anodized aluminum alloy. One full turn clockwise will advance the tension range by 25 lbs., and a counter-clockwise turn will decrease tension by the same amount. Recommended for purchase with 600-072-1 and 600-086-1.

Reference: **BAND-IT®** part number A44699.

**600-072-1 Standard
Tension Gauge**

The 600-072-1 Tension Gauge is used to check and calibrate the *Tie-Dex II®* standard hand tool to values noted on calibration sticker. Constructed of hardened steel, the gauge's accuracy is within ± 2 lbs.

Reference: **BAND-IT®** part number A48599.

**600-086-1 Micro
Tension Gauge**

The 600-086-1 Micro Tension Gauge is used to check and calibrate the *Tie-Dex II®* micro hand tool to values noted on calibration sticker. Constructed of hardened steel, the gauge's accuracy is within ± 2 lbs.

Reference: **BAND-IT®** part number A47599.

Metric Dimensions (mm) are indicated in parentheses.

Cad-Free Ni-PTFE Plating: Now From Glenair

Conductive Nickel-Fluorocarbon Polymer Plating Process Breaks 1000 Hr. Salt-Spray Barrier!

**New Cadmium Free
RoHS Compliant
Plating Solution for
EMI/RFI Interconnect
Applications**

The MIL-DTL-38999 Rev. L detail specification establishes several new cadmium-free conductive plating solutions including high-performance nickel-fluorocarbon polymer. Glenair's Ni-PTFE meets all D38999 performance requirements including a shell-to-shell conductivity maximum 2.5 millivolt drop potential.

1000 Hour Grey™ delivers outstanding performance in a broad range of land, sea, air and space interconnect applications. The non-reflective, non-magnetic, gun-metal gray surface finish is an ideal choice for tactical military systems with extraordinary corrosion protection requirements.

Advanced Durability, Lubricity Plus Outstanding Temperature Resistance!

The mechanical, electrical and environmental performance of the Glenair Ni-PTFE plating is truly outstanding, far surpassing that of other composite alloy/fluorocarbon polymer solutions:

- 2000+ Hrs. Salt Spray (Composite)
- -65°C to 175°C Temp. Rating
- 336+ Hr. Sulfur Dioxide Resistance
- Non-Magnetic
- Cadmium Free
- Low Coefficient of Friction
- Hexavalent Chromium Free
- Potassium Formate Resistant
- Low Shell-to-Shell Resistance
- Adheres to Composite Plastic
- 500+ Mating Cycles
- Low Outgassing

Composite Thermoplastic

Soup to Nuts

Composite thermoplastic interconnect components are nothing new. Plenty of manufacturers can offer you a selection of these weight-saving, corrosion-free products. But only Glenair has made an across-the-board commitment to integrate composite solutions into every facet of the interconnect system.

Glenair can offer today's interconnect engineer the ability to design and build next-

generation interconnect cable, box and conduit systems exclusively from composites. From the connector to the backshell, from the dust-cap to the junction box, from the feed-through to the shielding, from the conduit to the transition—Glenair offers you the freedom to build interconnect systems which are not only light weight and corrosion-free, but just as tough on EMI as traditional metal components. Soup to nuts.
